Concluding Paragraph

We now know that humans are causing the world to heat up by the burning of fossil fuels, so it is going to be the responsibility of all countries around the world, to do their part. Global warming has been blamed on everything from the melting of the polar ice caps to the increase in devastating storms, the loss of coral to the changing migration habits of the animal kingdom. According the IPCC report, even if people stopped burning the fossil fuels today, which are responsible for global warming, the effects would not go away in our lifetime. Therefore, if we do not want to go the way of the dinosaurs, it is going to be the responsibility of all of us, to do our part, to slow down the warming of our planet.
