Intel® Teach
Pre-Service Program

Research-proven professional development supporting 21st century skills

Intel® Teach Program courses promote standards-aligned, project-based approaches to learning with appropriate use of technology. The Faculty Review provides hands-on exploration of Intel Teach content and course design for integration into existing college course syllabi or development of new courses. The Faculty Review event, access to online tools and resources, all materials and ongoing customer support are provided without charge.

Faculty who complete the 3-day review are certified to utilize one or both courses in pre-service and/or in-service classes and to order free materials, including curriculum CDs for use as "textbooks":

- **Intel Teach Essentials Course**: establish a foundation of skills to fully integrate technology, formative assessment, and student-centered learning (*online course environment available*)
- **Intel Teach Thinking with Technology Course**: build effective technology integration skills, using free online tools to sharpen students' higher-order thinking.

To support the pedagogical approaches necessary for digital age learners, both courses incorporate Web 2.0 resources and social networking tools for higher-order thinking, assessment, collaboration, and communication.

For more information on the Intel® Teach Program and to apply to participate, visit:

Attend a Faculty Review

- Participation is open only to faculty (full-time or adjunct) who teach pre-service teachers and/or courses that address planning for instruction.
- Faculty should have intermediate technology skills.
- Each participating faculty member is expected to utilize the curriculum with at least 10 teachers per academic year

Faculty Review Dates, Times and Location:
