

## PLATFORM BRIEF

Intel® Xeon® Processor 5600/5500 Series and Intel® 5520 Chipset  
Embedded Computing

# Intel® Xeon® Processor 5600/5500 Series Platforms for Embedded Computing

Ideal for Single- or Dual-Socket Embedded, Communications, and Storage Applications

## Product Overview

The Intel® Xeon® processor 5600/5500 series, based on the latest generation Intel® microarchitecture (codenamed Nehalem), offers the first Intel Xeon processors on 32nm technology (5600 series), providing a follow-on to the Intel Xeon processor 5500 series on 45nm technology. These processors provide key embedded features such as extended lifecycle support along with options for thermally constrained applications while maintaining compatibility with enterprise platform configurations. The common microarchitecture and a common mechanical socket throughout both series provide investment protection and a simplified path to upgrades.

Utilizing second-generation High-k metal gate transistors, the 5600 series represents the next step in energy efficiency, performance and virtualization with an integrated memory controller. For example, the six-core Intel® Xeon® processor L5638<sup>Δ</sup> delivers a 36 percent performance gain within the same thermal profile over the previous-generation quad-core Intel® Xeon® processor L5518<sup>Δ.1</sup> Additionally, the Intel Xeon processor 5600 series includes Intel® AES New Instructions (Intel® AES-NI), providing robust encryption without increased performance overhead. These new instructions lead to improved performance in AES-based communications cryptographic workloads.

All the processors feature Intel® Virtualization Technology<sup>2</sup> for flexible virtualization, as well as Intel® QuickPath Technology. Additionally, a number of processors in

this series feature Intel® Turbo Boost Technology<sup>3</sup> and Intel® Hyper-Threading Technology<sup>4</sup> to deliver top performance for bandwidth-intensive applications.

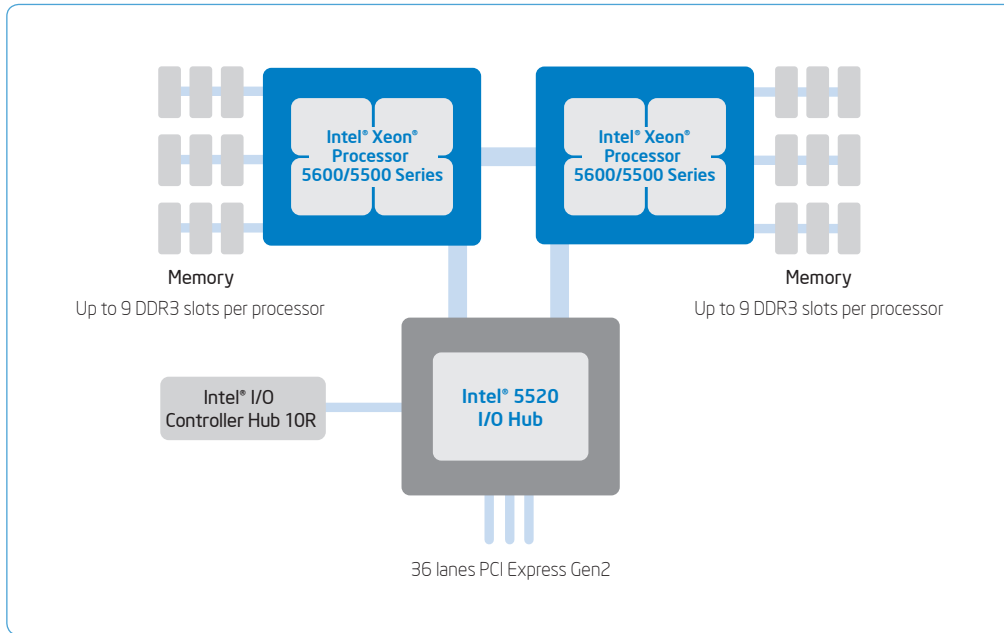

These platforms offer processors with up to six cores, with thermal design power (TDP) ranging from 38W to 80W. Four processor options provide robust thermal profiles, ideal for the Advanced-TCA\* form factor and applications requiring compliance with NEBS Level 3 thermal specifications.

Processors can be used in single- or dual-socket configurations with the Intel® 5520 chipset (see Figure 1). This chipset, consisting of the Intel® 5520 I/O Hub and Intel® I/O Controller Hub 10R, offers up to 42 lanes of PCI Express\* (36 lanes PCI Express Gen 2), SATA ports and support for RAID.

This platform provides the performance, memory and I/O capabilities needed to meet a wide range of compute-intensive embedded, storage and communications applications such as:

- Communication infrastructure servers, blades and appliances
- Security servers, blades and appliances
- Storage servers, blades and appliances
- Carrier-grade rack-mount servers
- Proprietary form factors, such as router modules
- AdvancedTCA-based blades
- Medical servers, blades and appliances

**Figure 1.** Dual-socket (shown) or single-socket configurations of Intel® Xeon® processor 5600/5500 series-based platforms are ideal for compute-intensive or thermally constrained embedded applications

## Software Overview

The following independent operating system and BIOS vendors provide support for these platforms.

| OPERATING SYSTEM               | CONTACT                             | BIOS                 |
|--------------------------------|-------------------------------------|----------------------|
| Microsoft Windows® XP          | Intel provides drivers <sup>5</sup> | American Megatrends  |
| Microsoft Windows Server® 2008 | Intel provides drivers <sup>5</sup> | Insyde Software      |
| Microsoft Windows® 2003        | Intel provides drivers <sup>5</sup> | Phoenix Technologies |
| Red Hat Enterprise Linux® 5    | Red Hat                             |                      |
| SUSE Linux® Enterprise 10      | Novell                              |                      |
| Wind River VxWorks® 6.6        | Wind River                          |                      |
| Wind River Linux®              | Wind River                          |                      |

## Platform Features and Benefits

| FEATURES                                                                                | BENEFITS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Supports key embedded platform requirements                                             | <b>Ideal for compute-intensive embedded applications.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Compatibility with Intel® enterprise server solutions                                   | Potential to maximize design reuse between enterprise and embedded solutions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Extended lifecycle product support                                                      | Protects system investment by enabling extended product availability for embedded customers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Low-power and robust thermal profile processor options (L5638, L5618, L5508, and L5518) | Ideal for NEBS Level 3 ambient operating temperature specifications (thermal profile).<br>Ideal for smaller form factors with thermal constraints (blades), especially solutions requiring compliance with AdvancedTCA* form factor specifications (PICMG 3.0).                                                                                                                                                                                                                                                                                                                |
| Embedded ecosystem support                                                              | Along with a strong ecosystem of hardware and software vendors, including members of the Intel® Embedded Alliance ( <a href="http://intel.com/go/eca">intel.com/go/eca</a> ), Intel helps to cost-effectively meet development challenges and speed time-to-market.                                                                                                                                                                                                                                                                                                            |
| Intelligent performance                                                                 | <b>Automatically adapts performance to fit application and business needs.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Intel® Turbo Boost Technology <sup>3</sup>                                              | Boosts performance for specific workloads by increasing processor frequency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Intel® QuickPath Technology                                                             | Delivers bandwidth improvement for data-intensive applications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Intel® Hyper-Threading Technology <sup>4</sup>                                          | Boosts performance for parallel, multi-threaded applications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Large memory capacity                                                                   | Up to 144 GB of main memory supports higher performance for data-intensive applications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Shared L3 cache                                                                         | Boosts performance while reducing traffic to the processor cores.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Intel® AES New Instructions (Intel® AES-NI) (5600 series only)                          | Faster, more efficient cryptographic performance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Automated low-power states                                                              | Puts processor, memory and I/O controller into the lowest available power states that will meet the requirements of the current workload.                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Flexible Virtualization                                                                 | <b>Enhances virtualization performance.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Intel® Xeon® processor 5600/5500 series                                                 | Hardware assists boost virtualization performance by allowing OS more direct access to the hardware.<br>Intel® Virtualization Technology <sup>2</sup> (Intel® VT) FlexMigration enables seamless migration of running applications among current and future Intel® processor-based servers.<br>Intel® VT FlexPriority improves virtualization performance by allowing guest OSs to read and change task priorities without VMM intervention.<br>Extended Page Tables provide better performance by reducing the overhead caused by page-table utilization of virtual machines. |
| Intel® 5520 chipset                                                                     | Intel® VT for Directed I/O helps speed data movement, giving designated virtual machines their own dedicated I/O devices, thus reducing performance overhead of the VMM in managing I/O traffic.                                                                                                                                                                                                                                                                                                                                                                               |

## Intel® 5520 Chipset for Embedded Computing

| PRODUCT                            | PACKAGE   | FEATURES                                                                                                                                                                                                                                                                                                                                                     |
|------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Intel® 5520 I/O Hub (36D)          | FCBGA1295 | Supports Intel® Xeon® processor 5600/5500 series at 6.4 GT/s, 5.86 GT/s and 4.8 GT/s speeds via Intel® QuickPath Interconnect Technology. Supports 36 lanes of PCI Express* 2.0 I/O, Intel® VT-c and Intel® VT-d enhancements for virtualization OS, and Intel® ICH10R; 27.1W TDP. Optional second Intel® 5520 IOH supports up to 72 lanes PCI Express* 2.0. |
| Intel® I/O Controller Hub (ICH10R) | PBGA676   | PCI Express* 6x1; six SATA ports; Intel® Matrix Storage Technology with RAID 0, 1, 5 and 10; 12 USB ports, Integrated Gigabit LAN controller 10/100/1000; 4.5W TDP.                                                                                                                                                                                          |

<sup>+</sup>GT/s = giga-transfers/second

Intel in Embedded and Communications: [intel.com/embedded](http://intel.com/embedded)

<sup>A</sup>Intel® processor numbers are not a measure of performance. Processor numbers differentiate features within each processor series, not across different processor sequences. See [http://www.intel.com/products/processor\\_number](http://www.intel.com/products/processor_number) for details.

<sup>1</sup>L5638 benchmarking results collected by Intel Corporation, February 2010. L5618 benchmarking results collected by Intel Corporation, January 2009.

Platform configurations:

- Intel® Xeon® processor L5518 at 2.13 GHz, 8 MB L3 Cache, 60W; Intel® 5520 chipset, 12x4 GB RDIMM DDR3-1066MHz
- Intel® Xeon® processor L5638 at 2.00 GHz, 12 MB L3 Cache, 60W; Intel® 5520 chipset, 12x4 GB RDIMM DDR3-1066MHz

Software configurations:

- Intel® Xeon® processor L5518: OS: Red Hat Linux 5.3.64 bit; Compiler: Intel® C/C+ 11.0; Benchmark CPU2006 v1.1
- Intel® Xeon® processor L5638: OS: SUSE Linux Enterprise Server 10 SP3 64 bit; Compiler: Intel® C/C+ 11.1; Benchmark CPU2006 v1.1

<sup>2</sup>Intel® Virtualization Technology requires a computer system with an enabled Intel® processor, BIOS, virtual machine monitor (VMM) and, for some uses, certain computer system software enabled for it. Functionality, performance or other benefits will vary depending on hardware and software configurations and may require a BIOS update. Software applications may not be compatible with all operating systems. Please check with your application vendor.

<sup>3</sup>Intel® Turbo Boost Technology requires a PC with a processor with Intel Turbo Boost Technology capability. Intel Turbo Boost Technology performance varies depending on hardware, software and overall system configuration. Check with your PC manufacturer on whether your system delivers Intel Turbo Boost Technology. For more information, see <http://www.intel.com/technology/turboboost>.

<sup>4</sup>Hyper-Threading Technology requires a computer system with a processor supporting Hyper-Threading Technology and an HT Technology-enabled chipset, BIOS and operating system. Performance will vary depending on the specific hardware and software you use. For more information including details on which processors support HT Technology, see [http://www.intel.com/products/ht/hypertreading\\_more.htm](http://www.intel.com/products/ht/hypertreading_more.htm).

<sup>5</sup>Drivers available at: [downloadcenter.intel.com](http://downloadcenter.intel.com) (enter chipset name).

<sup>6</sup>No computer system can provide absolute security under all conditions. Intel® Trusted Execution Technology (Intel® TXT) requires a computer system with Intel® Virtualization Technology, an Intel TXT-enabled processor, chipset, BIOS, Authenticated Code Modules and an Intel TXT-compatible measured launched environment (MLE). The MLE could consist of a virtual machine monitor, an OS or an application. In addition, Intel TXT requires the system to contain a TPM v1.2, as defined by the Trusted Computing Group and specific software for some uses. For more information, see [intel.com/technology/security](http://intel.com/technology/security)

<sup>7</sup>Not to exceed 360 hours per year.

Performance tests and ratings are measured using specific computer systems and/or components and reflect the approximate performance of Intel products as measured by those tests. Any difference in system hardware or software design or configuration may affect actual performance. Buyers should consult other sources of information to evaluate the performance of systems or components they are considering purchasing. For more information on performance tests and on the performance of Intel products, visit [intel.com/performance/resources/benchmark\\_limitations.htm](http://intel.com/performance/resources/benchmark_limitations.htm).

UNLESS OTHERWISE AGREED IN WRITING BY INTEL, THE INTEL PRODUCTS ARE NOT DESIGNED NOR INTENDED FOR ANY APPLICATION IN WHICH THE FAILURE OF THE INTEL PRODUCT COULD CREATE A SITUATION WHERE PERSONAL INJURY OR DEATH MAY OCCUR.

Intel may make changes to specifications and product descriptions at any time, without notice. Designers must not rely on the absence or characteristics of any features or instructions marked "reserved" or "undefined." Intel reserves these for future definition and shall have no responsibility whatsoever for conflicts or incompatibilities arising from future changes to them. The information here is subject to change without notice. Do not finalize a design with this information.

The products described in this document may contain design defects or errors known as errata which may cause the product to deviate from published specifications. Current characterized errata are available on request. Contact your local Intel sales office or your distributor to obtain the latest specifications and before placing your product order. Copies of documents which have an order number and are referenced in this document, or other Intel literature, may be obtained by calling 1-800-548-4725, or by visiting Intel's Web site at [www.intel.com](http://www.intel.com).
