## Intel Corporation

---

**Doug Fisher**  
**Corporate Vice President, General Manager of the Software and Services Group's Systems Software Division**  
**Intel Corporation**

Doug Fisher is corporate vice president and general manager of the Software and Services Group's (SSG) Systems Software Division. He leads a worldwide organization responsible for Intel's efforts in software product development, enabling and architecture analysis. His responsibilities span a broad range of efforts that includes pre-boot firmware, operating systems (Windows, MeeGo, Android, Chrome OS, OS X, and Solaris), virtualization, middleware software, and platform performance and power projections. In addition, Doug recently assumed responsibility for SSG product planning and program management.

Doug is currently chairman of the Linux Foundation and is a member of the internal board for Wind River Systems, a wholly owned subsidiary of Intel Corporation.

For the first few years after joining Intel in 1995, Doug managed several new product development and research efforts, including projects involving remote LAN access, TV data broadcasting and packaged Internet server solutions before moving to Intel's Enterprise Platform Group, where for 3 years he led the organization developing Server Management Software. In 1999, Doug transferred to Intel Online Services as the director of engineering for Europe and shortly thereafter was appointed director of worldwide engineering for Intel Online Services. Prior to joining Intel, Doug spent 10 years at Hewlett-Packard.

Doug holds a bachelor's degree in electrical engineering from Oregon State University and a master's in management from Stanford University.
