WHAT IS THE NEWS?

New details on Jasper Forest for Embedded, Communications and Storage

Innovate

Integrate

**Robust
Performance**
Lower System Power

**27 WATT
SAVINGS***

**Integration for
Savings**

**REAL ESTATE
AND POWER**

**Workload
Consolidation**

4 TO 1

Coming in early 2010

* Configurations of the systems used in the benchmark: two Jasper Forest processors, 2.13GHz GHz, 60W TDP, with Intel® 3420 chipset versus two Intel Xeon processors L5528, 2.13 GHz, 60 W TDP, with Intel® 5520 chipset

Lower Power, Higher Integration and Reduced Foot Print

Communications

Storage

Military/Aerospace

Advanced TCA*
200W

Storage Bridge Bay
60W-200W

Compact PCI
50-100W

Jasper Forest

Feature Overview

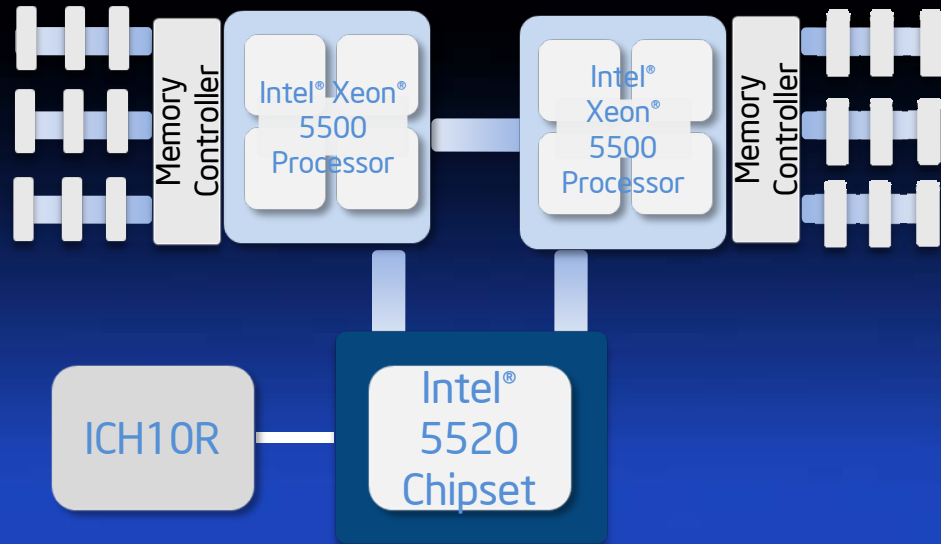

Innovate and Integrate

- Based on Intel® Xeon® Microarchitecture, formally code named Nehalem
- Integrated PCIe* Gen 2.0 I/O in processor
- Less power consumption
- Crystal Beach Direct Memory Access (DMA)
- Non-Transparent PCI-E* Bridging (NTB)
- Hardware RAID acceleration
- High TCase for NEBs and other thermal certifications
- 7 Year Lifecycle, 10 Year Reliability

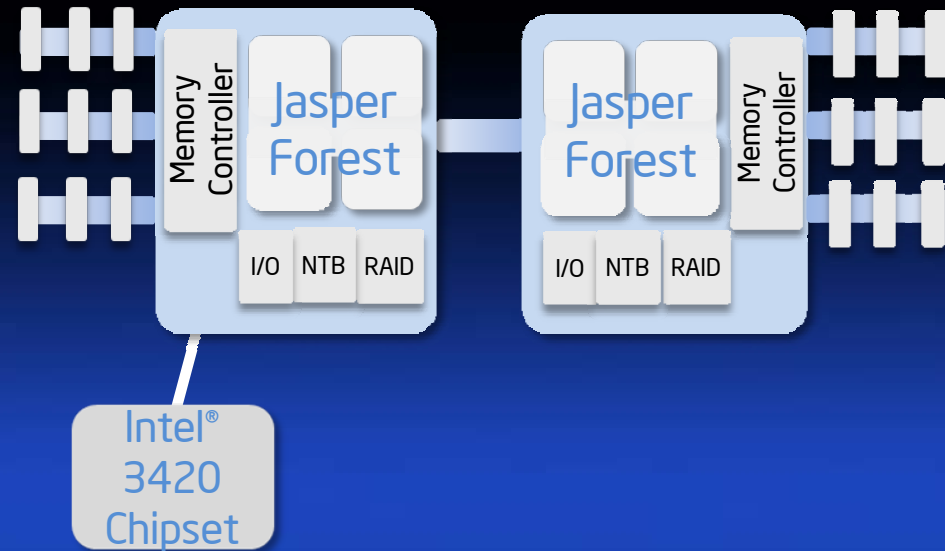

Integration

Intel® Xeon® 5500 Processor

Jasper Forest

**Provides a 27 watt system
power savings**

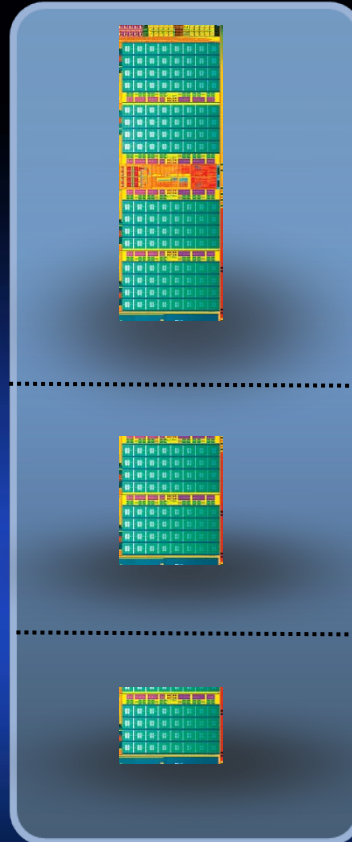

Scalability

Same Architecture

1 - 4 Cores
23W - 85W

One Common Socket

Intel®
Microarchitecture
(Nehalem)
45nm

48 to 85
watts

35 to 65
watts

23 to 30
watts

Summary

Jasper Forest Delivers Lower Power with Higher Integration

- Robust performance with a 27 watt system power savings
- I/O Hub Integration for real estate and power savings
- Workload consolidation

Non-Transparent Bridge (NTB) Benefits

- Enables failover for redundant systems (as shown above)
- Can connect two uni-processor systems and function as dual-processor
- Ability to connect to a non-IA system without a PCIe switch
