Intel® InBusiness™ Print Station

intel®

Start By Learning About the Intel® InBusiness™ Print Station

The Intel® InBusiness™ Print Station easily connects one or two printers to your network. You can locate printers anywhere in your office and print to them from any networked computer running Windows* 98, Windows 95, or Windows NT* 4.0.

The software from the CD-ROM installs quickly and easily on each PC on the network. The Setup program detects each printer connected to a Print Station, lets each user specify which printer to use, and installs the drivers for that printer.

Gather Equipment

- Printer cables from the Print Station to your printers must not exceed 6 feet or 1.83 meters and must be marked "IEEE 1284 compliant".
- Use Category 5 network cable to connect the Print Station to the hub or switch. Cable length must not exceed 100 meters (328 feet).
- If you want to connect a printer that is currently connected to a computer, remove the printer cable from the computer and move the printer to the location of the Print Station.

TIP: To wall-mount this product, use two # 4 pan head screws and the template in the center of the *Doing Business with Intel* book.

Intel® InBusiness™ Products

Intel InBusiness networking products provide everything that small businesses need to share resources and increase productivity. Designed specifically for small networks, these products include hubs, fast hubs, switches, and simple network appliances, perfect for sharing information over a small network.

Intel InBusiness™ Print Station

10 or 100 Mbps Hub or switch
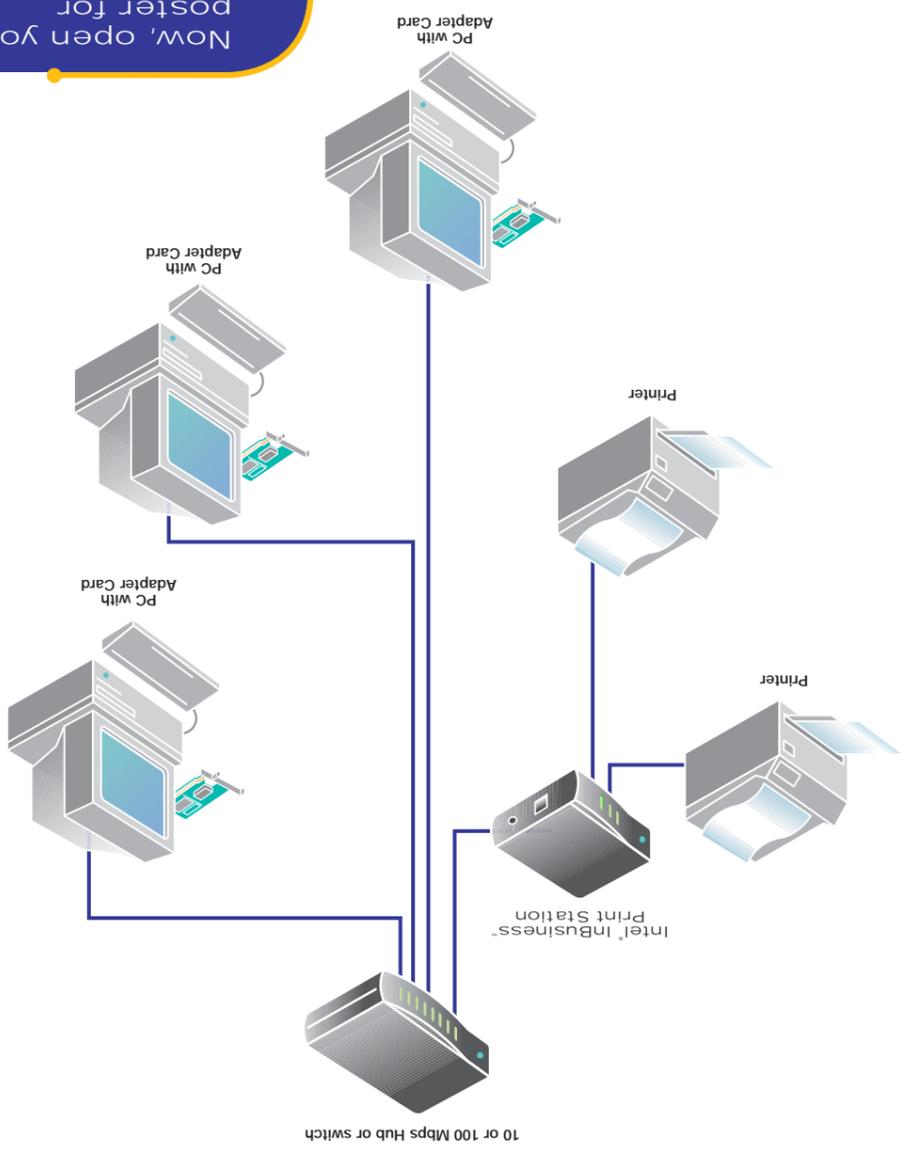

Now, open your poster for easy-to-follow setup directions.

2 Easy Steps

① Install the Print Station

1. Connect a network cable between the Print Station and your 10 or 100Mbps hub or switch.
Use Category 5 cable with RJ-45 network connectors. Cable length must not exceed 328 feet (100 meters). Use a standard numbered port on the hub or switch, not a port labeled Out to Hub, Uplink, Daisy Chain, X, or Crossover.

2. Connect the printer cables.
Connect the first printer to the Printer 1 port on the Print Station using a parallel printer cable.

3. Connect the Print Station's power adapter to the power connector and a power source.
Turn on the power to the Print Station and printers.

When the Status light turns green, the Print Station is ready to print.

The Print Station hardware installation is complete!

② Set up each computer to print

Use the Print Station CD-ROM to install the printing software on each computer. Do not install printers using the Windows* Add New Hardware or Add Printer wizards.

1. Insert the Intel InBusiness Print Station CD into a Windows* computer. If the setup program doesn't automatically start, run setup.exe from the CD. Click the Start menu, click Run and browse to setup.exe on your CD-ROM drive.

2. Click the Setup button.

3. Follow the instructions in the Setup program.
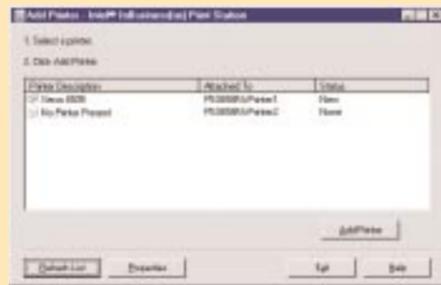

Tip: After you use the CD to set up one printer, you can set up another from the Intel InBusiness Print Station program folder on your computer. Click Start, Programs, Intel InBusiness Print Station and Add Printer.

Register Your Print Station

Registering your Intel® InBusiness™ Print Station authorizes you to receive free installation assistance for 90 days. You can register your Print Station using the registration card in Doing Business with Intel. More information on technical service and the three year limited warranty is included in *Doing Business with Intel.*

Intel® InBusiness™ Print Station

What the lights on the Print Station mean

Status light: Green indicates normal operation. Blinking green indicates printing activity. Red indicates a problem. The light blinks amber during startup. If the light blinks red, you can count the blinks and use the following to solve most problems:

6 Blinks: Disconnect the power and printers from the Print Station and then reconnect them.

7 Blinks: Check the network connection to the hub or switch.

9 Blinks: Turn off the power on the Print Station and turn it on again.
If the light blinks in any other pattern, contact your supplier or Intel's Customer Support.

LAN light: Green indicates a network connection at 10 Mbps. Amber indicates a network connection at 100 Mbps. Blinking indicates network activity.

Test Page: Press this button to send a test page to each printer.

Easy Expansion

To add more printers to your network, simply add another Print Station to your network hub or switch and connect the printers.

If you can't print...

✓ **Printer is offline.** Check the printer to see if it is out of paper or jammed.

✓ **Printer cable is too long or defective.** Make sure the printer cable is stamped "1284 compliant" and does not exceed six feet or 1.83 meters in length.

✓ **Your computer is not configured correctly.** Run the Print Station Add Printer wizard again and make sure that you select the correct printer driver. For information, see your printer documentation.

✓ **Print Station is not functioning.** Check the Status light on the Print Station.

For more troubleshooting help, click the Start menu, Programs, Intel InBusiness Print Station, and Troubleshooting.

Need More Help?

You can reach Intel's product support site on the Web at http://support.intel.com. A trained technical specialist will take your call Monday through Friday between 7 a.m. and 8 p.m., and Saturday between 7 a.m. and 3 p.m., Pacific time. Call **1-916-377-7000**. In Europe, support hours are Monday through Friday between 08:30 and 16:00 (UK time) and 09:30 and 17:00 (Continental Europe).
