Disclaimers

Information in this document is provided in connection with Intel® products. No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted by this document. Except as provided in Intel's Terms and Conditions of Sale for such products, Intel assumes no liability whatsoever, and Intel disclaims any express or implied warranty, relating to sale and/or use of Intel® products including liability or warranties relating to fitness for a particular purpose, merchantability, or infringement of any patent, copyright or other intellectual property right. Intel products are not designed, intended or authorized for use in any medical, life saving, or life sustaining applications or for any other application in which the failure of the Intel product could create a situation where personal injury or death may occur. Intel may make changes to specifications and product descriptions at any time, without notice.

Intel® server boards contain a number of high-density VLSI and power delivery components that need adequate airflow for cooling. Intel's own chassis are designed and tested to meet the intended thermal requirements of these components when the fully integrated system is used together. It is the responsibility of the system integrator that chooses not to use Intel developed server building blocks to consult vendor datasheets and operating parameters to determine the amount of airflow required for their specific application and environmental conditions. Intel Corporation can not be held responsible if components fail or the server board does not operate correctly when used outside any of their published operating or non-operating limits.

Introduction

This document is intended to provide users of the Intel® Storage System SSR212PP with a guide to the different client operating systems, adapter cards, and peripherals tested by Intel® and / or EMC* on this platform.

This document will continue to be updated as new adapters, peripherals, and client operating systems are tested or until the Intel® Storage System SSR212PP is no longer in production. Each new release of the document will present updated information as well as continue to provide the information from previous releases.

Intel will only provide support for those adapters and peripherals under the specified system configuration (System BIOS and Firmware revisions) and client operating systems versions with which they were tested.

Test Overview

Testing performed on the Intel® Storage System SSR212PP is classified as Adapter / Peripheral Compatibility and Stress Testing.

The latest version of the embedded operating system signifies the latest supported version at the time of the actual test run. Each new release of this document may have a newly supported release of a given operating system. Previous releases of a supported operating system may not be tested beyond the basic installation test process.

Intel Adapter / Peripheral Compatibility and Stress Testing

Adapter / Peripheral Compatibility and Stress testing is performed only on the most current release of the supported embedded operating system at the time of a given validation run. The Adapter / Peripheral Compatibility and Stress testing process consists of three areas: Platform, Adapter Compatibility, and Stress.

Platform: Each platform will successfully install the embedded operating system, successfully run a disk stress test, and successfully run a network stress test.

Adapter Compatibility: Adapter compatibility validation (CV) testing uses test suites to gain an accurate view of how the platform performs with adapters under the embedded operating system. These tests are designed to show hardware compatibility between the cards and the server platform and include functional testing only. No heavy stressing of the systems or the cards is performed for CV testing.

Stress Testing: This test sequence uses configurations that include Ethernet add-in adapters in the one available slot, or a minimum 24-hour test run without injecting errors. Each configuration passes an installation test, a Network/Disk Stress test. Any fatal errors that occur will require a complete test restart.

Intel's Support Commitment for Adapter / Peripheral Compatibility and Stress Testing

Intel commits to provide the following level of customer support for client operating systems that receive Adapter / Peripheral Compatibility and Stress testing:

- Intel will provide support for customer issues with the embedded operating system involving installation and/or functionality of the server board with or without the

adapters and peripherals listed in this document as having been tested under the particular embedded operating system.

- Support is defined as assistance in root causing issues, and determining a customer acceptable resolution to the issue associated with the client operating system. The resolution may include, but is not limited to, on-board controller driver changes, engaging the vendor for resolution, BIOS changes, firmware changes, or determining a customer acceptable workaround for the issue.
- Intel will go through some of the steps to achieve certification to ensure its customers do not run across any problems, but the actual certification is the responsibility of the individual customer.

For embedded operating systems, client operating systems, adapter cards, and peripherals not listed in this document, there is no support commitment. Intel will consider support requests on a case-by-case basis.

SSR212PPf / SSR212PP2f Configuration Rules

Note: In this document, array means storage system; SP means Storage Processor.

- A total of 10 servers are supported per storage system.
- A total of 10 Host Bus Adapters (HBAs) are supported on single-SP storage systems.
- A total of 20 HBAs are supported on dual-SP storage systems.
- A total of 4 storage systems per server are supported.
- A total of 256 virtual disks per storage system are supported.
- User installable HBAs are limited to the Emulex* and the QLogic* E models.
- HBAs from different manufacturers cannot be mixed in the same server.
- User installable switches are limited to the Qlogic SB3050-08A-E and the Brocade* DS-220B-FF-D. Pre-configured zoning or the Zoning Wizard must be used with these switches to be user installable. All other supported switches are not user installable and require professional installation.
- Switches from different manufacturers cannot be mixed in the same SAN.
- If an SSR212PP series system is connected to a server, no other type of storage system can be connected to that server. A server must be connected to a storage system either directly or through a switch. A server CANNOT be connected to the SAME storage system both directly and through a switch.
- All direct connect configurations are user installable. For example, figures 1 and 2.
- Any switch configuration utilizing an Inter Switch Link (ISL) is not user installable. No more than 2 switches can be connected with an ISL. For example, figures 14 and 15.
- In any supported multiple-server configuration, the servers can run the same operating system or any combination of supported operating systems. The snapshot feature requires that the source and secondary servers are connected to the same SP. As a result, the snapshot feature is not supported for figures 4 and 5.
- PowerPath* must be installed on all attached servers for all configurations.
- A clustered configuration requires one or more HBAs per server and a single-SP or dual-SP storage system.
- 2 to 8 nodes are supported in a clustered configuration. All nodes in a cluster configuration must run the same operating system. Diagrams may show other operating systems, but dissimilar operating systems cannot be clustered.
- All nodes in a cluster configuration must be connected to the same SPs. For example, figures 2, 7 and 8.
- The installation of an operating system on a storage system for the purpose of booting the server from the storage system is not considered a user installable option.

- . Boot from a storage system on clustered servers running Windows 2000 require a dedicated boot HBA.
- . Boot from a storage system on clustered servers running Windows 2003 DO NOT require a dedicated boot HBA.

Backup Device Support

EMC's testing and qualification responsibilities only apply to SAN (switch) attached backup devices. SAN attached backup configurations include a backup device connected to a port on the switch. These configurations are not currently user installable. Please refer to the EMC ESM for SAN attached backup supported configurations.

For tape devices connected directly to a backup host, It is strongly recommends that the component vendors' supported configuration matrices are reviewed (host configuration matrix for compatibility with SCSI or Fibre Channel interface used to connect to tape device, tape device vendor for compatibility with selected SCSI or Fibre Channel interface and backup software vendor for compatibility with the tape device).

Path Definition

A path is a connection between an HBA port and a target an SP port in a storage system. Each HBA that is directly connect to, or zoned through, a switch to an SP port is considered an initiator of that SP port. An HBA port can be zoned through different switch ports to the same SP port or to different SP ports, resulting in multiple paths between the HBA port and an SP.

Supported Client Operating Systems

The following table provides a list of Intel supported client operating systems compatible with the Intel® Storage System SSR212PP. Each of the listed client operating systems was tested for compatibility with Intel® Storage System SSR212PP system configuration listed in Section 2 of this document. Client operating systems are supported only with the specified client system with which they were tested. Refer to the tables under specific operating systems for more details including service packs and updates supported.

Operating Systems
Microsoft* Windows* Server 2003 Enterprise Edition
Microsoft Windows 2000 Server
Red Hat* Enterprise Linux* AS 3.0
Red Hat* Enterprise Linux* AS 4.0
SuSe* Enterprise Server 9.0.

1. Powerpath is supported in boot from SAN configurations for Windows 2003 systems running STORPort drivers (QLogic & Emulex). Windows 2003 servers using STORPort drivers require a Microsoft STORPort hotfix installed to boot with Powerpath. Please see your driver's requirements for the STORPort hotfix (QFE) version.

2. Legacy (x86) boot mode supported only for this server. EFI boot is not supported. EFI boot code should be removed from the HBA if installed.

3. HPQ (Compaq) Proliant server models that are not listed in the ESM but are only differentiated from supported models by an "R" designator, are rack-mountable servers and are supported.

4. BIOS 1.70a3

5. Firmware Version 2.50a6

6. SNTIA HBA API Supported.

7. Driver Version 1.20a3 Requires Microsoft STORPort hotfix Q916048. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048). NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. STORPort Miniport Driver

8. Driver Version 1.11a3 Requires Microsoft STORPort hotfix Q916048. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048). NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. STORPort Miniport Driver

9. EMC recommends upgrading to the most recent, EMC-Approved, HBA driver.

10. This dual port HBA is only supported on DELL PE 6850 in the right-most slot (seen from the rear of the server chassis) marked "FC"

11. VDS (Virtual Disk Service) is currently supported for Windows 2003 R2 operating systems. EMC Solutions Enabler 6.2 (minimum version) is required to support VDS for Windows 2003 R2.

12. Driver Version 9.1.2.16 Requires Microsoft STORPort hotfix Q916048. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048). NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. STORPort Miniport Driver

13. BIOS 1.06

14. EMC provides in-depth documentation for configurations with Emulex HBAs that contains helpful information for installing and configuring Emulex HBAs with EMC Storage. Visit the EMC driver page on the Emulex website

(<http://www.emulex.com/ts/docuem/eme/index.html>) and download part number 300-001-157 for guide "EMC Fibre Channel with Emulex Host Bus Adapters in the Windows Environment."

15. EMC provides documentation for boot configurations that contains helpful information for systems booting from EMC storage. Visit EMC Powerlink and download part number 300-000-603 for the Windows Host Connectivity Guide.

16. Firmware Version 2.10a10

17. **This HBA is equivalent to the QLogic QLA2310.**

18. Driver Version 9.1.2.15 Requires Microsoft STORPort hotfix Q916048. Please see

[http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048). NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. STORPort Miniport Driver

19. BIOS 1.47

20. When booting from an external storage array, press F1 during server POST and set BIOS Start Options to point to the bus slot containing the SAN boot adapter (Default is Planar SCSI.)

21. PCI-X slots in this server only support low-profile HBAs with low-profile brackets. Please ensure your HBA vendor has included the proper bracket to fit this server.

22. BIOS 1.11

23. Accepts PCI-X 1.0 and 2.0 HBAs.

24. Support for 4Gb fibre channel HBAs requires an IBM SPORE to be submitted to IBM.

25. x64 versions of Windows 2003 require the Adaptec SAS SCSI driver from the IBM Support website.

26. EMC provides in-depth documentation for configurations with QLogic HBAs that contains helpful information for installing and configuring QLogic HBAs with EMC Storage. This documentation is located in the EMC section of the QLogic website (<http://www.qlogic.com>) along with HBA drivers, and BIOS.

27. BIOS 1.02

28. Driver Version 9.1.2.19 Requires Microsoft STORPort hotfix Q916048. Please see

[http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048). NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. STORPort Miniport Driver

29. Firmware Version 2.50a8

30. EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.

31. BIOS 1.43

32. Driver Version 1.20a3 Requires Microsoft STORPort hotfix Q916048. Please see

[http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048). NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed.

33. Firmware Version 1.91a1

34. Firmware Version 1.91a5

35. BIOS 1.05

36. BIOS 1.08

37. **This HBA is equivalent to the QLogic QLA2340.**

38. BIOS 1.45

39. Dual port PCI-X fibre channel mezzanine card option is embedded. No PCI/PCI-X slots available.

40. Firmware Version 1.91a2

41. Driver Version 1.11a1 Requires Microsoft STORPort hotfix Q916048. Please see

[http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048). NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. STORPort Miniport Driver

42. Driver Version 1.10x1

43. Driver Version 9.1.2.15 STORPort Miniport Driver

44. Driver Version 9.1.2.11 END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003. SCSI Miniport (SCSIPort) Driver. EMC recommends using STORPort drivers where available.

45. Driver Version 9.1.2.16 STORPort Miniport Driver

46. Driver Version 1.10x1 Requires Microsoft STORPort hotfix Q916048. Please see

[http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048). NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. Driver can be acquired from Unisys at

<http://www.support.unisys.com/support.htm>

47. Driver Version 1.20a3 Requires Microsoft STORPort hotfix Q916048. Please see

[http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048). NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. STORPort Miniport Driver Driver can be acquired from Unisys at

<http://www.support.unisys.com/support.htm>

48. Driver Version 1.20a3 STORPort Miniport Driver

49. Driver Version 2.40a3 END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003. As of 2.40a2 Microsoft will no longer allow the Emulex Port Driver to be used in any HCT LOGO solution or block submissions. The Port driver is still digitally signed, but STORPort drivers will be required for all new HCT LOGO solution and block submissions. SCSI FC Port driver. EMC recommends using STORPort drivers where available.

50. Driver Version 1.11a3

51. Driver Version 1.11a3 STORPort Miniport Driver

52. BIOS 1.16

53. EMC supported drivers, firmware, and boot BIOS can be downloaded from <http://www.emulex.com> in the EMC section, by obtaining the supported driver for the Emulex LP1050-E.

54. Driver Version 1.11a3 Requires Microsoft STORPort hotfix Q916048. Please see

[http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048). NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed.

55. EMC does not support booting from external arrays if the boot LUN uses a FAT32 file system and Powerpath is installed. For Powerpath/Boot support, NTFS must be used.
56. Driver Version 9.0.2.17 Requires Microsoft STORPort hotfix Q916048. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048). NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. Minimum supported driver due to compatibility reasons. STORPort Miniport Driver
57. BX6xx-series systems use an embedded fibre channel controller. Contact Fujitsu Siemens to acquire the proper BIOS for the embedded fibre channel controller.
58. **FSC Fibre Channel module. Dual channel 2GBit/s HBA for BX6xx-series blade servers only.**
59. Firmware Version 2.50a4
60. Driver Version 9.1.2.16 If using EFI boot driver for external boot, use QLogic EFI Boot code version 1.40. Available at <http://www.qlogic.com> Requires Microsoft STORPort hotfix Q916048. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048). NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. STORPort Miniport Driver
61. Firmware Version 2.10a9
62. BIOS 1.71a0
63. Internal port(s) on QLogic or McData 4Gb FC switch module(s) must be set to 4Gb to SAN boot.
64. Mixing 2Gb and 4Gb fibre channel expansion cards is not supported in this server.
65. Refer to EMC Knowledgebase ID emc105679 for any special HBA drivers that may be required.
66. Due to the HS20's embedded FC-SW design, array lun masking is required to assign LUNS to each individual blade server.
67. Dual-port FC switch module. Can be used in place of Optical PassThru Module (OPM.)
68. BIOS 1.12
69. RPQ or Unisys Custom Engineering Request (CER) required.
70. Driver Version 1.10x1 Requires Microsoft STORPort hotfix Q916048. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048). NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. STORPort Miniport Driver
71. **BladeCenter support for Windows 2000 operating systems requires an IBM SPORE to be submitted to IBM, then if approved by IBM, be subsequently submitted to EMC as an RPQ for review.**
72. Driver Version 1.10x1 Requires Microsoft STORPort hotfix Q916048. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048). NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. STORPort Miniport Driver Driver can be acquired from Unisys at <http://www.support.unisys.com/support.htm>
73. BIOS 1.48
74. Driver Version 9.1.2.11
75. 4GB HBAs are not supported in this server. RPQs for 4GB HBAs will not be approved for this server.

Microsoft Windows 2003 [x86]

Where replication of boot LUN is supported, any use of the replicated boot LUN other than in original host may lead to hardware/configuration mismatch that render the replicated boot LUN unusable. Any issues that arise in trying to use the boot LUN in a host that is non-identical to the source host is outside of the scope of what EMC can support. Also, in any case due to environment failure where I/O is not written back to the source LUN, or if the source LUN is not left in a stable state by the source host, the replicated LUN is not guaranteed to be any more usable than the source. Also, there may be specific software licensing that needs to be investigated when duplicating the boot LUN.

Intel® Storage System SSR212PP-Series

Microsoft Windows 2003 [x86]

1. VDS (Virtual Disk Service) is currently supported for Windows 2003 R2 operating systems. EMC Solutions Enabler 6.2 (minimum version) is required to support VDS for Windows 2003 R2.
2. Powerpath is supported in boot from SAN configurations for Windows 2003 systems running STORPort drivers (QLogic & Emulex). Windows 2003 servers using STORPort drivers require a Microsoft STORPort hotfix installed to boot with Powerpath. Please see your driver's requirements for the STORPort hotfix (QFE) version.
3. BIOS 1.70a3
4. SNIA HBA API Supported.
5. Driver Version 2.40a3 END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003.
6. Driver Version 1.20a3 Requires Microsoft STORPort hotfix Q916048. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048). NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. STORPort Miniport Driver
7. Firmware Version 2.50a6
8. BIOS 1.11
9. Driver Version 9.1.2.16 Requires Microsoft STORPort hotfix Q916048. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048).
NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. STORPort Miniport Driver
10. Driver Version 9.1.2.11 END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003. SCSI Miniport (SCSIPort) Driver. EMC recommends using STORPort drivers where available. This driver requires Microsoft SCSIPort hotfix Q883114. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];883114](http://support.microsoft.com/default.aspx?scid=kb;[LN];883114)
11. Supports LUNs greater than 2TB in size. Minimum Service Pack 1 (SP1) required.
12. Maximum supported LUN size is 2TB for Windows 2003 without Service Pack 1 (SP1.)
13. Driver Version 1.20a3 STORPort Miniport Driver Requires Microsoft STORPort hotfix Q908980. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];908980](http://support.microsoft.com/default.aspx?scid=kb;[LN];908980)
14. Driver Version 9.1.2.16 STORPort Miniport Driver Requires Microsoft STORPort hotfix Q908980. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];908980](http://support.microsoft.com/default.aspx?scid=kb;[LN];908980)
15. Firmware Version 2.50a8
16. Driver Version 1.20a3
17. EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.
18. EMC recommends upgrading to the most recent, EMC-Approved, HBA driver.
19. BIOS 1.47
20. Driver Version 9.1.2.16 STORPort Miniport Driver
21. Driver Version 9.1.2.15 STORPort Miniport Driver
22. Driver Version 9.1.2.11 END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003. SCSI Miniport (SCSIPort) Driver. EMC recommends using STORPort drivers where available.
23. EMC provides in-depth documentation for configurations with QLogic HBAs that contains helpful information for installing and configuring QLogic HBAs with EMC Storage. This documentation is located in the EMC section of the QLogic website (<http://www.qlogic.com>) along with HBA drivers, and BIOS.
24. BIOS 1.02
25. Driver Version 9.1.2.14 END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003. SCSI Miniport (SCSIPort) Driver. EMC recommends using STORPort drivers where available. This driver requires Microsoft SCSIPort hotfix Q883114. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];883114](http://support.microsoft.com/default.aspx?scid=kb;[LN];883114)
26. Driver Version 9.1.2.19 Requires Microsoft STORPort hotfix Q916048. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048).
NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. STORPort Miniport Driver
27. EMC provides documentation for boot configurations that contains helpful information for systems booting from EMC storage. Visit EMC Powerlink and download part number 300-000-603 for the Windows Host Connectivity Guide.
28. Driver Version 9.1.2.15 STORPort Miniport Driver Requires Microsoft STORPort hotfix Q908980. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];908980](http://support.microsoft.com/default.aspx?scid=kb;[LN];908980)
29. Driver Version 9.1.2.19 STORPort Miniport Driver Requires Microsoft STORPort hotfix Q908980. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];908980](http://support.microsoft.com/default.aspx?scid=kb;[LN];908980)
30. BIOS 1.23
31. Driver Version 9.1.2.11 Minimum supported driver due to compatibility reasons. SCSI Miniport (SCSIPort) Driver
32. Driver Version 9.1.2.16 Minimum supported driver due to compatibility reasons. STORPort Miniport Driver
33. Driver Version 9.1.2.16 Minimum supported driver due to compatibility reasons. STORPort Miniport Driver Requires Microsoft STORPort hotfix Q908980. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];908980](http://support.microsoft.com/default.aspx?scid=kb;[LN];908980)
34. HPQ (Compaq) Proliant server models that are not listed in the ESM but are only differentiated from supported models by an "R" designator, are rack-mountable servers and are supported.
35. Driver Version 9.1.2.11 Minimum supported driver due to compatibility reasons. This driver requires Microsoft SCSIPort hotfix Q883114. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];883114](http://support.microsoft.com/default.aspx?scid=kb;[LN];883114) SCSI Miniport (SCSIPort) Driver
36. EMC provides in-depth documentation for configurations with Emulex HBAs that contains helpful information for installing and configuring Emulex HBAs with EMC Storage. Visit the EMC driver page on the Emulex website (<http://www.emulex.com/ts/doc OEM/emc/index.html>) and download part number 300-001-157 for guide "EMC Fibre Channel with Emulex Host Bus Adapters in the Windows Environment."
37. Driver Version 2.40a3 END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003. SCSI FC Port driver As of 2.40a2 Microsoft will no longer allow the Emulex Port Driver to be used in any HCT LOGO solution or block submissions. The Port driver is still digitally signed, but STORPort drivers will be required for all new HCT LOGO solution and block submissions. SCSI FC Port driver. EMC recommends using STORPort drivers where available.
38. Supports Stratus OS 3.1.x.
39. Driver Version 9.1.2.15 Minimum supported driver due to compatibility reasons. STORPort Miniport Driver Requires Microsoft STORPort hotfix Q908980. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];908980](http://support.microsoft.com/default.aspx?scid=kb;[LN];908980)

40. PowerEdge 2550 and PowerVault 775N support a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
41. When booting from an external storage array, press F1 during server POST and set BIOS Start Options to point to the bus slot containing the SAN boot adapter (Default is Planar SCSI.)
42. Support for 4Gb fibre channel HBAs requires an IBM SPORE to be submitted to IBM.
43. Requires Stratus OS 3.1
44. Driver Version 9.1.2.15 Requires Microsoft STORPort hotfix Q916048. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048).
NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. Minimum supported driver due to compatibility reasons. STORPort Miniport Driver
45. 4GB HBAs are not supported in this server. RPQs for 4GB HBAs will not be approved for this server.
46. Supports Stratus OS 4.1 FTSSS Release
47. BIOS 1.45
48. Dual port PCI-X fibre channel mezzanine card option is embedded. No PCI/PCI-X slots available.
49. Driver Version 1.11a3 STORPort Miniport Driver
50. Driver Version 1.20a3 STORPort Miniport Driver
51. Firmware Version 1.91a2
52. Driver Version 2.40a3 END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003. STORPort Miniport Driver
53. Driver Version 1.11a3 STORPort Miniport Driver Requires Microsoft STORPort hotfix Q908980. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];908980](http://support.microsoft.com/default.aspx?scid=kb;[LN];908980)
54. EMC does not support booting from external arrays if the boot LUN uses a FAT32 file system and Powerpath is installed. For Powerpath/Boot support, NTFS must be used.
55. EMC supported drivers, firmware, and boot BIOS can be downloaded from <http://www.emulex.com> in the EMC section, by obtaining the supported driver for the Emulex LP1050-E.
56. Driver Version 1.11a3 Requires Microsoft STORPort hotfix Q916048. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048).
NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. STORPort Miniport Driver
57. Driver Version 1.20a3 Requires Microsoft STORPort hotfix Q908980. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];908980](http://support.microsoft.com/default.aspx?scid=kb;[LN];908980)
58. Driver Version 1.11a3 Requires Microsoft STORPort hotfix Q908980. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];908980](http://support.microsoft.com/default.aspx?scid=kb;[LN];908980)
59. Legacy (x86) boot mode supported only for this server. EFI boot is not supported. EFI boot code should be removed from the HBA if installed.
60. Firmware Version 1.91a5
61. Driver Version 2.40a3 END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. This driver requires Microsoft SCSIPIort hotfix Q883114. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];Q883114](http://support.microsoft.com/default.aspx?scid=kb;[LN];Q883114)

Intel® Storage System SSR212PP-Series

[http://support.microsoft.com/default.aspx?scid=kb;\[LN\];883114](http://support.microsoft.com/default.aspx?scid=kb;[LN];883114)

80. QLogic SANSurfer/SANBlade Manager is not supported. Use QLogic SANCLI utility.
81. 3.2Ghz and 3.6Ghz versions of this server are supported.
82. Driver Version 9.1.2.15 Requires Microsoft STORPort hotfix Q916048. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048).
NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. STORPort Miniport Driver
83. Firmware Version 2.50a4
84. Firmware Version 1.90a5
85. BIOS 1.71a0
86. Mixing 2Gb and 4Gb fibre channel expansion cards is not supported in this server.
87. **BladeCenter support for Windows 2000 operating systems requires an IBM SPORE to be submitted to IBM, then if approved by IBM, be subsequently submitted to EMC as an RPQ for review.**
88. Internal port(s) on QLogic or McData 4Gb FC switch module(s) must be set to 4Gb to SAN boot.
89. Refer to EMC Knowledgebase ID emc105679 for any special HBA drivers that may be required.
90. Due to the HS20's embedded FC-SW design, array lun masking is required to assign LUNS to each individual blade server.
91. Dual-port FC switch module. Can be used in place of Optical PassThru Module (OPM.)
92. BIOS 1.12
93. Please read Stratus CAC Alert 2300 prior to the installation of QLA2460-E-SP HBAs.
94. Driver Version 9.0.2.17 Minimum supported driver due to compatibility reasons. STORPort Miniport Driver
95. **FSC Fibre Channel module. Dual channel 2GBit/s HBA for BX6xx-series blade servers only.**
96. Driver Version 9.0.2.17 Minimum supported driver due to compatibility reasons. STORPort Miniport Driver Requires Microsoft STORPort hotfix Q908980. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];908980](http://support.microsoft.com/default.aspx?scid=kb;[LN];908980)
97. Dell PowerEdge 6450 does not support Emulex LP9802/DC HBAs.
98. BX600 uses an embedded fibre channel controller. Contact Fujitsu Siemens to acquire proper BIOS for embedded fibre channel controller.
99. PCI-X slots in this server only support low-profile hbas with low-profile brackets. Please ensure your HBA vendor has included the proper bracket to fit this server.
100. Firmware Version 1.91a1
101. Driver Version 9.1.2.15
102. BIOS 1.48
103. This HBA is equivalent to the QLogic QLA2340.
104. BX6xx-series systems use an embedded fibre channel controller. Contact Fujitsu Siemens to acquire the proper BIOS for the embedded fibre channel controller.
105. Accepts PCI-X 1.0 and 2.0 HBAs.
106. Driver Version 9.1.2.10 END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003. SCSI Miniport (SCSIPort) Driver. EMC recommends using STORPort drivers where available. This driver requires Microsoft SCSIPort hotfix Q883114. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];883114](http://support.microsoft.com/default.aspx?scid=kb;[LN];883114)
107. BIOS 1.43
108. Firmware Version 1.90a4
109. Driver Version 9.1.2.11 END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003. SCSI Miniport (SCSIPort) Driver. EMC recommends using STORPort drivers where available. SCSI Miniport (SCSIPort) Driver
110. Driver Version 9.1.2.11
111. Driver Version 9.1.2.10 END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. 112. Firmware Version 2.10a9
113. Driver Version 1.11a3 Requires Microsoft STORPort hotfix Q916048. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048).
NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed.
114. Driver Version 9.1.2.15 Requires Microsoft STORPort hotfix Q908980. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];908980](http://support.microsoft.com/default.aspx?scid=kb;[LN];908980)
115. QLogic SanBlade Manager is not supported.
116. Bus Enumeration Issue Causes Problems using SYMCLI SCSI bus enumeration of disks will change depending on cold boot or warm boot. This causes symcli commands to fail because the path is changed and SYMCLI can no longer communicate with the Symmetrix.
- By "shutdown" and booting system, internal disks are assigned first, followed by Symmetrix disks. By "restart" the system, Symmetrix disks are assigned first, followed by internal disks. Drive letter are not changed in both cases. The workaround is to perform "symcfg discover" after rebooting.
117. Supports Stratus OS 2.0.X through 2.1.X.
118. Systems running Stratus OS 1.2.2.X or 1.3 require MS hotfix Q327477 and VxVM 2.7 Hotfix 5A. Stratus OS 1.3.1 and above incorporates these hotfixes.
119. Supports Stratus OS 1.3.X through 2.1.X.
120. **This HBA is equivalent to the QLogic QLA2310.**
121. Driver Version 1.11a1 Requires Microsoft STORPort hotfix Q916048. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048).
NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. STORPort Miniport Driver
122. Driver Version 1.10x1
123. RPQ or Unisys Custom Engineering Request (CER) required.
124. Driver Version 1.10a4 STORPort Miniport Driver
125. Driver Version 1.02a3 Requires Microsoft STORPort hotfix Q916048. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048).
NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. STORPort Miniport Driver Driver can be acquired from Unisys at <http://www.support.unisys.com/support.htm>
126. Driver Version 1.10a4 Requires Microsoft STORPort hotfix Q916048. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048).
NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. STORPort Miniport Driver Driver can be acquired from Unisys at <http://www.support.unisys.com/support.htm>

Microsoft Windows 2000*

Where replication of boot LUN is supported, any use of the replicated boot LUN other than in original host may lead to hardware/configuration mismatch that render the replicated boot LUN unusable. Any issues that arise in trying to use the boot LUN in a host that is non-identical to the source host is outside of the scope of what EMC can support. Also, in any case due to environment failure where I/O is not written back to the source LUN, or if the source LUN is not left in a stable state by the source host, the replicated LUN is not guaranteed to be any more usable than the source. Also, there may be specific software licensing that needs to be investigated when duplicating the boot LUN.

1. EMC provides in-depth documentation for configurations with Emulex HBAs that contains helpful information for installing and configuring Emulex HBAs with EMC Storage. Visit the

EMC driver page on the Emulex website (<http://www.emulex.com/ts/docuem/emc/index.html>) and download part number 300-001-157 for guide "EMC

Fibre Channel with Emulex Host

Bus Adapters in the Windows Environment."

2. BIOS 1.70a3

3. EMC does not support booting from external arrays if the boot LUN uses a FAT32 file system and Powerpath is installed. For Powerpath/Boot support, NTFS must be used.

Intel® Storage System SSR212PP-Series

Microsoft Windows 2000*

4. EMC provides documentation for boot configurations that contains helpful information for systems booting from EMC storage. Visit EMC Powerlink and download part number 300-000-603 for the Windows Host Connectivity Guide.
5. Firmware Version 2.10a10
6. SNIA HBA API Supported.
7. Driver Version 2.40a3 SCSI FC Port driver
8. Driver Version 2.41a1 SCSI FC Port driver
9. Windows 2000 hosts running less than SP4 could be susceptible to data loss during LUN expansion operations. This issue is corrected by Microsoft in SP4, or by applying hotfix 327020. See EMC Solution IS emc73538 and Microsoft Knowledge Base article 327020 for more information.
10. EMC recommends upgrading to the most recent, EMC-Approved, HBA driver.
11. Firmware Version 1.91a5
12. HPQ (Compaq) Proliant server models that are not listed in the ESM but are only differentiated from supported models by an "R" designator, are rack-mountable servers and are supported.
13. Driver Version 9.1.2.10
14. Driver Version 9.1.2.11
15. BIOS 1.05
16. EMC provides in-depth documentation for configurations with QLogic HBAs that contains helpful information for installing and configuring QLogic HBAs with EMC Storage. This documentation is located in the EMC section of the QLogic website (<http://www.qlogic.com>) along with HBA drivers, and BIOS.
17. Legacy (x86) boot mode supported only for this server. EFI boot is not supported. EFI boot code should be removed from the HBA if installed.
18. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
19. For external boot configurations running EMC Powerpath on Windows 2000, HP Proliant BL30p & BL35p require a minimum of Powerpath version 4.4.1.
20. Dual port PCI-X fibre channel mezzanine card option is embedded. No PCI/PCI-X slots available.
21. BIOS 1.45
22. Not supported with Emulex LP8000-EMC HBA.
23. PowerEdge 2550 and PowerVault 775N support a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
24. For AX100 configurations, only Dell PowerVault systems with dual CPUs are supported.
25. BIOS 1.23
26. Driver Version 9.1.2.10 This driver requires Microsoft SCSIPort hotfix Q883114. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];883114](http://support.microsoft.com/default.aspx?scid=kb;[LN];883114)
27. BIOS 1.47
28. Driver Version 9.1.2.11 This driver requires Microsoft SCSIPort hotfix Q883114. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];883114](http://support.microsoft.com/default.aspx?scid=kb;[LN];883114)
29. EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.
30. Due to the HS20's embedded FC-SW design, array lun masking is required to assign LUNS to each individual blade server.
31. Internal port(s) on QLogic or McData 4Gb FC switch module(s) must be set to 4Gb to SAN boot.
32. Driver Version 2.40a3
33. BIOS 1.71a0
34. BIOS 1.43
35. Driver Version 2.40a3 END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003. As of 2.40a2 Microsoft will no longer allow the Emulex Port Driver to be used in any HCT LOGO solution or block submissions. The Port driver is still digitally signed, but STORPort drivers will be required for all new HCT LOGO solution and block submissions.
36. Firmware Version 2.50a8
37. Driver Version 2.41a1 END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003. As of 2.40a2 Microsoft will no longer allow the Emulex Port Driver to be used in any HCT LOGO solution or block submissions. The Port driver is still digitally signed, but STORPort drivers will be required for all new HCT LOGO solution and block submissions.
38. BIOS 1.08
39. Driver Version 9.1.2.14 END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003. SCSI Miniport (SCSIPort) Driver. EMC recommends using STORPort drivers where available.
40. BIOS 1.02
41. When booting from an external storage array, press F1 during server POST and set BIOS Start Options to point to the bus slot containing the SAN boot adapter (Default is Planar SCSI.)
42. Firmware Version 2.50a6
43. **This HBA is equivalent to the QLogic QLA2310.**
44. 4GB HBAs are not supported in this server. RPQs for 4GB HBAs will not be approved for this server.
45. BIOS 1.06
46. Driver Version 9.1.2.14 END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003. SCSI Miniport (SCSIPort) Driver. EMC recommends using STORPort drivers where available. This driver requires Microsoft SCSIPort hotfix Q883114. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];883114](http://support.microsoft.com/default.aspx?scid=kb;[LN];883114)
47. Proliant DL360 G4 servers with a BIOS prior to P52 may not be running a fully ACPI-compliant BIOS. Emulex 4gb HBAs require the latest ACPI-compliant BIOS and your server may require Windows 2000 to be reinstalled. You do not need to reinstall Windows 2000 if you had an ACPI-compliant BIOS and then upgraded to a newer ACPI-compliant BIOS. You only need to reinstall Windows 2000 if you did not have an ACPI BIOS or an ACPI-compliant BIOS before you upgraded the BIOS. Refer to Microsoft knowledge base article 256841 for more information. (<http://support.microsoft.com/?kbid=256841&sd=RMVP>)
48. PowerPath supported. ATF/CDE not supported.
49. This dual port HBA is only supported on DELL PE 6850 in the right-most slot (seen from the rear of the server chassis) marked "FC"

Intel® Storage System SSR212PP-Series

50. Firmware Version 1.91a1
 51. Accepts PCI-X 1.0 and 2.0 HBAs.
 52. Support for 4Gb fibre channel HBAs requires an IBM SPORE to be submitted to IBM.
 53. Driver Version 9.1.2.14
 54. BIOS 1.16
 55. Update Rollup 1 for Windows 2000 SP4 is supported. For more information on this Rollup and to download the necessary software, please see <http://support.microsoft.com/default.aspx?scid=kb;en-us;891861>
 56. Host must be offline for interfamily Symmetrix microcode upgrade.
 57. Driver Version 9.1.2.11 Minimum supported driver due to compatibility reasons.
 58. Refer to EMC Knowledgebase ID emc105679 for any special HBA drivers that may be required.
 59. This HBA is equivalent to the QLogic QLA2340.
 60. This server only supports 5 Volt HBAs: QLogic 22XX family (if applicable), QLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
 61. For IBM xSeries Servers running Windows 2000 with IBM ServerRaid controller 4M, the ServerRaid Driver must be 6.00 or above for use with EMC PowerPath 3.0 and above. IBM driver can be downloaded at: <http://www-3.ibm.com/pc/support/site.wss/document.do?Indocid=MIGR-39723>
 62. Driver Version 9.1.2.11 END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003. SCSI Miniport (SCSIPort) Driver. EMC recommends using STORPort drivers where available.
63. FSC Fibre Channel module. Dual channel 2GBit/s HBA for BX6xx-series blade servers only.
 64. BX6xx-series systems use an embedded fibre channel controller. Contact Fujitsu Siemens to acquire the proper BIOS for the embedded fibre channel controller.
 65. Firmware Version 1.91a2
 66. Dual-port FC switch module. Can be used in place of Optical PassThru Module (OPM.)
 67. BIOS 1.12
 68. Driver Version 2.30a2 SCSI FC Port driver
 69. Driver Version 2.21a0
 70. Driver Version 2.22a8
 71. Firmware Version 1.90a5
 72. Firmware Version 1.90a4
 73. BIOS 1.48
 74. PCI-X slots in this server only support low-profile HBAs with low-profile brackets. Please ensure your HBA vendor has included the proper bracket to fit this server.
 75. EMC supported drivers, firmware, and boot BIOS can be downloaded from <http://www.emulex.com> in the EMC section, by obtaining the supported driver for the Emulex LP1050-E.
 76. BX600 uses an embedded fibre channel controller. Contact Fujitsu Siemens to acquire proper BIOS for embedded fibre channel controller.
 77. If using Dell PERC Controller, requires PERC 2 or PERC 3 with OpenManager 3.0 and Array Manager 3.1. The afamgt.sys must be version 2.6.0.3486 (or above).
 78. Dell PowerEdge 6450 does not support Emulex LP9802/DC HBAs.
 79. HPQ Proliant ML350 (1GHz) : D04,F04 (11/13/2000) , HPQ Proliant ML350(600,733,800,866,933 MHz) : D02, F04 (11/13/2000).
 80. Requires minimum BIOS v4.01 rev A (5/17/2002) for use with Emulex HBAs.
 81. Driver Version 9.1.2.16 Requires Microsoft STORPort hotfix Q916048. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];916048](http://support.microsoft.com/default.aspx?scid=kb;[LN];916048).
 NOTE: Hotfix Q916048 currently requires Service Pack 1 (SP1) to be installed before the hotfix can be installed. Requires Microsoft STORPort hotfix Q903081. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];903081](http://support.microsoft.com/default.aspx?scid=kb;[LN];903081) STORPort Miniport Driver Requires Microsoft STORPort hotfix Q908980. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];908980](http://support.microsoft.com/default.aspx?scid=kb;[LN];908980)
 82. Systems running Stratus OS 1.2.2.X or 1.3 require MS hotfix Q327477 and VxVM 2.7 Hotfix 5A. Stratus OS 1.3.1 and above incorporates these hotfixes.
 83. Bus Enumeration Issue Causes Problems using SYMCLI SCSI bus enumeration of disks will change depending on cold boot or warm boot. This causes symcli commands to fail because the path is changed and SYMCLI can no longer communicate with the Symmetrix.
 By "shutdown" and booting system, internal disks are assigned first, followed by Symmetrix disks. By "restart" the system, Symmetrix disks are assigned first, followed by internal disks. Drive letter are not changed in both cases. The workaround is to perform "symcfg discover" after rebooting.
 84. Supports Stratus OS 1.3.X through 2.1.X.
 85. QLogic SANSurfer/SANBlade Manager is not supported. Use QLogic SANCLI utility.
 86. QLogic SanBlade Manager is not supported.
 87. Supports Stratus OS 2.0.X through 2.1.X.

1. BIOS 1.70a3 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
2. Driver Version 8.0.16.18 Driver is integrated into the kernel.
3. Firmware Version 2.50a6
4. SNIA HBA API Supported.
5. BIOS 1.08 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
6. Driver Version 8.01.02-d4 Driver is integrated into the kernel.
7. BIOS 1.12 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
8. BIOS 1.12
9. Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
10. Firmware Version 1.91a5 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
11. EMC supported drivers, firmware, and boot BIOS can be downloaded from <http://www.emulex.com> in the EMC section, by obtaining the supported driver for the Emulex LP1050-E.
12. BIOS 1.47 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
13. **FSC Fibre Channel module. Dual channel 2GBit/s HBA for BX6xx-series blade servers only.**
14. Firmware Version 2.50a6 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
15. Driver Version 8.0.16.17 Driver is integrated into the kernel.
16. Booting from the SAN with PowerPath is supported. Refer to the Path Management Software section for supported versions of PowerPath.
17. VxVM is not supported on servers booting from the array.
18. Red Hat does not currently support reiserfs on RHEL 3.0. As a result, EMC supports only the ext2 and ext3 filesystems on RHEL 3.0. If there is a customer requirement for a different filesystem, please submit an RPQ.
19. The LVM included as part of this update is supported and can be used in conjunction with PowerPath emcpower pseudo device file names as well as native sd device file names.
20. BIOS 1.23 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
21. Driver Version 7.07.00 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
22. PCI-X slots in this server only support low-profile hbas with low-profile brackets. Please ensure your HBA vendor has included the proper bracket to fit this server.
23. Accepts PCI-X 1.0 and 2.0 HBAs.
24. Support for 4Gb fibre channel HBAs requires an IBM SPORE to be submitted to IBM.
25. This system is supported only when the IBM ServeRAID 8i SAS RAID controller (13N227) is installed or when the server is being booted remotely from external storage.
26. 4GB HBAs are not supported in this server. RPQs for 4GB HBAs will not be approved for this server.
27. Driver/BIOS are available at <http://www.qlogic.com>
28. HPQ (Compaq) Proliant server models that are not listed in the ESM but are only differentiated from supported models by an "R" designator, are rack-mountable servers and are supported.
29. Driver Version 8.01.05 Driver/BIOS are available at <http://www.qlogic.com>
30. BIOS 1.02 Driver/BIOS are available at <http://www.qlogic.com>
31. Firmware Version 1.91a5
32. Driver Version 8.01.00 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
33. BIOS 1.17 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
34. Driver Version 8.01.02-d4 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com> Driver is integrated into the kernel.
35. Driver Version 8.01.02-d4 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
36. Driver Version 7.3.6 Driver is integrated into the kernel.
37. Firmware Version 2.50a8 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
38. Driver Version 8.01.06 Driver/BIOS are available at <http://www.qlogic.com>
39. Driver Version 7.3.3 Driver is integrated into the kernel.
40. BIOS 1.05 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
41. Requires BIOS 1.05 available from the EMC-approved section of the QLogic website at <http://www.qlogic.com>
42. Driver Version 7.07.05 Driver/BIOS are available at <http://www.qlogic.com>
43. Driver Version 8.00.03b-1 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
44. For Emulex attach, a LUN within the range of 000 ~007 must exist in order for the FC driver to scan all devices. For QLogic attach, LUN 000 must exist in order for the FC driver to scan all devices.
45. Booting from the SAN with PowerPath is not supported.
46. BIOS 1.11 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
47. Driver Version 7.3.2 Driver is integrated into the kernel.

Intel® Storage System SSR212PP-Series

Red Hat* Linux (32-Bit)

48. Driver Version 8.01.04-d7 Driver is integrated into the kernel.
49. Driver Version 8.0.16.27 Driver is integrated into the kernel.
50. Firmware Version 1.90a5 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
51. BladeCenter support for Windows 2000 operating systems requires an IBM SPORE to be submitted to IBM, then if approved by IBM, be subsequently submitted to EMC as an RPQ for review.
52. PowerPath is not supported.
53. BIOS 1.71.a0 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
54. Firmware Version 2.10.a10 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
55. This HBA is equivalent to the QLogic QLA2340.
56. Driver Version 7.07.04-b6 Driver is integrated into the kernel.
57. Driver Version 7.07.00
58. dual core machine not support
59. Firmware Version 1.91a1
60. Driver Version 8.0.16.18
61. BIOS 1.70a3
62. Driver Version 7.07.05
63. BIOS 1.02
64. BIOS 1.08 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com> Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
65. BIOS 1.05 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com> Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
66. Driver Version 8.01.00
67. Driver Version 8.0.16.6_p3 Driver is integrated into the kernel.
68. BIOS 1.16
69. BIOS 6.00a1 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
70. Firmware Version 2.50a8 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com> Driver is integrated into the kernel.
71. Driver Version 7.3.2 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
72. Driver Version 8.0.16.6_x2 Driver is integrated into the kernel.
73. The LVM integrated into the kernel is supported. Please note, however, that the LVM will not recognize PowerPath emcpower pseudo device file names. The native sd device file names must be used.
74. Driver Version 7.01.01 Driver is integrated into the kernel.
75. Driver Version 7.03.00 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
76. Driver Version 7.1.14 Driver is integrated into the kernel.
77. Firmware Version 2.50a8
78. Firmware Version 2.50a8 Driver is integrated into the kernel.
79. Driver Version 7.01.01-RH1 Driver is integrated into the kernel.
80. Driver Version 7.04.00 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
81. Driver Version 7.1.14 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
82. Driver Version 7.1.14 Driver/Firmware available at <http://www.emulex.com>
83. Driver Version 2.02e Driver/Firmware available at <http://www.emulex.com>

7. Driver Version 8.0.1.00 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
8. BIOS 1.17 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
9. HPQ (Compaq) Proliant server models that are not listed in the ESM but are only differentiated from supported models by an "R" designator, are rack-mountable servers and are supported.
10. Booting from the SAN with PowerPath is supported. Refer to the Path Management Software section for supported versions of PowerPath.
11. VxVM is not supported on servers booting from the array.
12. 4GB HBAs are not supported in this server. RPQs for 4GB HBAs will not be approved for this server.
13. Firmware Version 1.91a5 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
14. BIOS 1.05 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
15. Requires BIOS 1.05 available from the EMC-approved section of the QLogic website at <http://www.qlogic.com>
16. This HBA is equivalent to the QLogic QLA2340.
17. Firmware Version 2.50a6
18. BIOS 1.08 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
19. EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.
20. BIOS 1.12 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
21. Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
22. BIOS 1.12
23. EMC supported drivers, firmware, and boot BIOS can be downloaded from <http://www.emulex.com> in the EMC section, by obtaining the supported driver for the Emulex LP1050-E.
24. BIOS 1.16
25. Firmware Version 2.50a8 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
26. BIOS 1.23 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
27. Firmware Version 2.50a6 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
28. BIOS 6.00a1 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
29. Driver Version 7.07.00 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
30. Red Hat does not currently support reiserfs on RHEL 3.0. As a result, EMC supports only the ext2 and ext3 filesystems on RHEL 3.0. If there is a customer requirement for a different filesystem, please submit an RPQ.
31. The LVM included as part of this update is supported and can be used in conjunction with PowerPath emcpower pseudo device file names as well as native sd device file names.
32. Driver Version 7.3.3 Driver is integrated into the kernel.
33. Powerpath is supported in boot from SAN configurations for Windows 2003 systems running STORPort drivers (QLogic & Emulex). Windows 2003 servers using STORPort drivers require a Microsoft STORPort hotfix installed to boot with Powerpath. Please see your driver's requirements for the STORPort hotfix (QFE) version.
34. Firmware Version 2.50a8
35. Driver Version 8.0.1.02-d4 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com> Driver is integrated into the kernel.
36. Driver Version 8.0.1.02-d4 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
37. Driver Version 7.07.00
38. Driver Version 7.3.6 Driver is integrated into the kernel.
39. BIOS 1.12 Requires BIOS 1.12 available in the EMC-approved section of the QLogic website at <http://www.qlogic.com>
40. BIOS 1.43 Supports BIOS 1.43. Available at <http://www.qlogic.com>
41. Driver Version 8.0.1.02-d4 Driver is integrated into the kernel.
42. Driver Version 8.0.1.-2-d4 Driver is integrated into the kernel.
43. Driver Version 7.07.04b6 Driver is integrated into the kernel.
44. Driver Version 7.07.04-b6 Driver is integrated into the kernel.
45. BIOS 1.02 Driver/BIOS are available at <http://www.qlogic.com>
46. Driver Version 8.0.1.06 Driver/BIOS are available at <http://www.qlogic.com>
47. Booting from the SAN with PowerPath is not supported.
48. Driver Version 8.0.1.05 Driver/BIOS are available at <http://www.qlogic.com>
49. **FSC Fibre Channel module. Dual channel 2GBit/s HBA for BX6xx-series blade servers only.**
50. Driver Version 7.07.05 Driver/BIOS are available at <http://www.qlogic.com>
51. Driver Version 8.0.16.17 Driver is integrated into the kernel.
52. Driver Version 8.0.16.18 Driver is integrated into the kernel.
53. BIOS 1.11 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
54. Driver Version 7.3.2 Driver is integrated into the kernel.

55. Firmware Version 1.91a2 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
56. FCode Value 1.70a3 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
57. Dual port PCI-X fibre channel mezzanine card option is embedded. No PCI/PCI-X slots available.
58. Driver Version 8.01.00
59. dual core machine not support
60. Driver Version 8.0.16.6_p3 Driver is integrated into the kernel.
61. Firmware Version 1.90a5 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
62. Support for 4Gb fibre channel HBAs requires an IBM SPORE to be submitted to IBM.
63. This system is supported only when the IBM ServeRAID 8i SAS RAID controller (13N227) is installed or when the server is being booted remotely from external storage.
64. Accepts PCI-X 1.0 and 2.0 HBAs.
65. PowerEdge 2550 and PowerVault 775N support a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
66. PowerPath is not supported.
67. Firmware Version 2.10.a10 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
68. BIOS 1.71.a0 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
69. **BladeCenter support for Windows 2000 operating systems requires an IBM SPORE to be submitted to IBM, then if approved by IBM, be subsequently submitted to EMC as an RPQ for review.**
70. PCI-X slots in this server only support low-profile hbas with low-profile brackets. Please ensure your HBA vendor has included the proper bracket to fit this server.
71. Firmware Version 2.10a9 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
72. Firmware Version 1.91a1
73. BIOS 1.08 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com> Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
74. BIOS 1.05 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com> Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
75. BIOS 1.43
76. EMC recommends upgrading to the most recent, EMC-Approved, HBA driver.
77. BIOS 1.45 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
78. BIOS 1.71a0 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
79. BIOS 1.70a3
80. Driver Version 7.3.2 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
81. For Emulex attach, a LUN within the range of 000 –007 must exist in order for the FC driver to scan all devices. For QLogic attach, LUN 000 must exist in order for the FC driver to scan all devices.
82. BIOS 1.48 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
83. Driver/BIOS are available at <http://www.qlogic.com>
84. BIOS 1.02
85. Driver Version 7.07.05
86. Driver Version 9.1.2.11
87. Driver Version 9.1.2.10
88. Driver Version 9.1.2.15 STORPort Miniport Driver
89. Driver Version 9.1.2.11 END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003. SCSI Miniport (SCSIPort) Driver. EMC recommends using STORPort drivers where available.
90. Driver Version 9.1.2.16 STORPort Miniport Driver
91. Driver Version 8.00.03b-1 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
92. Firmware Version 2.50a4 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
93. Driver Version 8.01.16.17
94. Driver Version 8.0.16.18
95. Driver Version 7.03.00 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
96. Driver Version 7.01.01 Driver is integrated into the kernel.
97. Tested as an installable file system on a Linux cluster Ibrix Fusion File system version 1.3 is supported with this configuration. FusionFS Server Appliance Requirements: CPU- x86, Xeon, 3+GHz, 2GB RAM SMP Not Supported NIC –Intel Pro 1000 Server adapter with 5.2.39 or BroadcomBCM5700 Please check E-Lab Navigator for the latest version of PowerPath supported on this configuration.
98. The LVM integrated into the kernel is supported. Please note, however, that the LVM will not recognize PowerPath emcpower pseudo device file names. The native sd device file names must be used.
99. Driver Version 7.1.14 Driver is integrated into the kernel.
100. Driver Version 7.01.01-RH1 Driver is integrated into the kernel.
101. Driver Version 7.1.14 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
102. Driver Version 7.1.14 Driver/Firmware available at <http://www.emulex.com>
103. Driver Version 2.02e Driver/Firmware available at <http://www.emulex.com>
104. Driver Version 7.1.14
105. Firmware Version 2.50a8 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com> Driver is integrated into the kernel.
106. Driver Version 7.03.00
107. Driver Version 7.03.00 QLogic driver obtained from <http://www.qlogic.com>
108. Driver Version 8.0.16.6_x2 Driver is integrated into the kernel.
109. Firmware Version 2.50a8 Driver is integrated into the kernel.
110. Driver Version 8.0.16.6_x2
111. Driver Version 8.0.16.6_x2-2

1. Driver Version 8.01.02-sles Driver is integrated into the kernel.
2. SNIA HBA API Supported.
3. BIOS 1.47 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
4. PowerPath is not supported.
5. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
6. Novell OES is supported on this kernel.
7. Native multipathing is not supported on boot-from-SAN configurations.
8. Supported kernels: 2.6.16.21-0.8. Confirm kernel support with server vendor.
9. SGI's XFS filesystem is supported.
10. BIOS 1.43 Supports BIOS 1.43. Available at <http://www.qlogic.com>
11. Driver Version 8.01.04-k Driver is integrated into the kernel.
12. BIOS 1.12 Requires BIOS 1.12 available in the EMC-approved section of the QLogic website at <http://www.qlogic.com>
13. Driver Version 8.01.06 Driver/BIOS are available at <http://www.qlogic.com>
14. BIOS 1.02 Driver/BIOS are available at <http://www.qlogic.com>
15. BIOS 1.16
16. Driver Version 8.01.02-sles Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
17. Driver Version 8.01.05 Driver/BIOS are available at <http://www.qlogic.com>
18. Driver Version 8.0.16.17 Driver is integrated into the kernel.
19. BIOS 1.70a3 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
20. Firmware Version 1.91a5
21. Booting from the SAN with PowerPath is supported. Refer to the Path Management Software section for supported versions of PowerPath.
22. VxVM is not supported on servers booting from the array.
23. Firmware Version 2.50a6
24. Driver Version 8.0.16.6_p3 Driver is integrated into the kernel.
25. Driver Version 8.0.16.6_p3
26. BIOS 1.08 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
27. Driver Version 8.01.00
28. **FSC Fibre Channel module. Dual channel 2GBit/s HBA for BX6xx-series blade servers only.**

29. Firmware Version 2.50a8 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
30. BIOS 6.00a1 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
31. Driver Version 8.0.16.6_p3 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
32. Driver Version 8.01.00 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
33. Driver Version 8.0.16.6-p3 Driver is integrated into the kernel.
34. Requires BIOS 1.05 available from the EMC-approved section of the QLogic website at <http://www.qlogic.com>
35. BIOS 1.05 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
36. Firmware Version 1.91a5 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
37. BIOS 1.12
38. BIOS 1.12 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
39. EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.
40. Firmware Version 3.92a2 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
41. Support for 4Gb fibre channel HBAs requires an IBM SPORE to be submitted to IBM.
42. This system is supported only when the IBM ServeRAID 8i SAS RAID controller (13N227) is installed or when the server is being booted remotely from external storage.
43. Accepts PCI-X 1.0 and 2.0 HBAs.
44. 4GB HBAs are not supported in this server. RPQs for 4GB HBAs will not be approved for this server.
45. Firmware Version 1.91a1
46. Driver Version 8.1.6 Driver is integrated into the kernel.
47. Firmware Version 1.90a5 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
48. HPQ (Compaq) Proliant server models that are not listed in the ESM but are only differentiated from supported models by an "R" designator, are rack-mountable servers and are supported.
49. Firmware Version 2.50a6 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
50. BIOS 1.23 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
51. Driver Version 8.01.04-k
52. PowerEdge 2550 and PowerVault 775N support a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
53. BIOS 1.11 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
54. Driver Version 8.1.6
55. Firmware Version 2.50a8
56. BIOS 6.00a1
57. Powerpath is supported in boot from SAN configurations for Windows 2003 systems running STORPort drivers (QLogic & Emulex). Windows 2003 servers using STORPort drivers require a Microsoft STORPort hotfix installed to boot with Powerpath. Please see your driver's requirements for the STORPort hotfix (QFE) version.
58. BIOS 1.43
59. This HBA is equivalent to the QLogic QLA2340.
60. Firmware Version 2.10a10
61. EMC recommends upgrading to the most recent, EMC-Approved, HBA driver.
62. BIOS 1.17 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>

1. Booting from the SAN with PowerPath is supported. Refer to the Path Management Software section for supported versions of PowerPath.

2. VxVM is not supported on servers booting from the array.

3. BIOS 1.70a3 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>

4. Firmware Version 2.50a6

5. Driver Version 8.0.16.6-p3 Driver is integrated into the kernel.

6. SNIA HBA API Supported.

7. Driver Version 8.01.00 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>

8. BIOS 1.08 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>

9. Driver Version 8.0.16.6_p3 Driver is integrated into the kernel.

10. Firmware Version 1.91a5

11. Firmware Version 1.91a5 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>

12. BIOS 1.47 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
 13. BIOS 1.17 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
 14. HPQ (Compaq) Proliant server models that are not listed in the ESM but are only differentiated from supported models by an "R" designator, are rack-mountable servers and are supported.
 15. BIOS 1.05 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
 16. Requires BIOS 1.05 available from the EMC-approved section of the QLogic website at <http://www.qlogic.com>
 17. Driver Version 8.01.02-sles Driver is integrated into the kernel.
 18. PowerPath is not supported.
 19. Driver Version 8.0.16.17 Driver is integrated into the kernel.
 20. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
 21. SGI's XFS filesystem is supported.
 22. BIOS 1.23 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
 23. Driver Version 8.0.16.6_p3
 24. Firmware Version 2.50a8 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
 25. Driver Version 8.01.02-sles Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
 26. This HBA is equivalent to the QLogic QLA2340.
 27. Driver/BIOS are available at <http://www.qlogic.com>
 28. Driver Version 8.01.05 Driver/BIOS are available at <http://www.qlogic.com>
 29. BIOS 1.02 Driver/BIOS are available at <http://www.qlogic.com>
 30. Firmware Version 2.10a10
 31. Firmware Version 2.50a6 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
 32. BIOS 1.12
 33. Driver Version 8.01.00
 34. BIOS 1.12 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
 35. BIOS 1.11 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
 36. Support for 4Gb fibre channel HBAs requires an IBM SPORE to be submitted to IBM.
 37. This system is supported only when the IBM ServeRAID 8i SAS RAID controller (13N227) is installed or when the server is being booted remotely from external storage.
 38. Accepts PCI-X 1.0 and 2.0 HBAs.
 39. 4GB HBAs are not supported in this server. RPQs for 4GB HBAs will not be approved for this server.
40. FSC Fibre Channel module. Dual channel 2Gbit/s HBA for BX6xx-series blade servers only.
 41. Firmware Version 1.90a5 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
 42. BIOS 1.71.a0 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
 43. Firmware Version 2.10.a10 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
 44. Driver Version 8.01.02-sles Available in the EMC-approved section of the Emulex website. <http://www.emulex.com> Driver is integrated into the kernel.
 45. BIOS 1.16
 46. Driver Version 8.0.16.6_p3 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
 47. BIOS 6.00a1 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
48. BladeCenter support for Windows 2000 operating systems requires an IBM SPORE to be submitted to IBM, then if approved by IBM, be subsequently submitted to EMC as an RPQ for review.
 49. Firmware Version 1.91a1

1. Replicas of application data volumes of physical (native) servers created using SnapView, MirrorView and SAN Copy can be presented to a VMware ESX Server. These replicas configured on the VMware ESX server must be Raw Device Mapping only (VMFS is not supported). Replicas of application data volumes configured as Raw Device Mapping volumes on a VMware ESX server can also be presented to a physical (native) server. Replication of Operating System volumes and application volumes from a physical to virtual or virtual to physical environment using CLARiiON replication software is not supported at this time. Replication of Operating System volumes, application volumes and application data volumes from a virtual to virtual environment using CLARiiON replication software is supported.

2. Beginning with ESX Server v2.5.0 Navigsphere components are supported as follows: Navi Agent and Server Utility at the console level only; Array Initialization Utility and CLI at both the console and VM levels; Browser interface to Navigsphere Express or Navi Manager at the VM level only.

3. Supported with VirtualCenter VMotion.

4. Replication of both VMFS and Raw Device Mapping (RDM) volumes is supported using CLARiiON replication software (SnapView, MirrorView and SAN Copy) starting with Release 19. The OS/application as well as application data can be replicated using CLARiiON replication software.

Note:

- 1) The virtual disks in a VMFS volume must be in persistent-mode during the replication process.
- 2) CLARiiON VSS provider is not supported on VMFS volumes.
- 3) If replicating an entire VMFS volume that contains a number of virtual disks on a single CLARiiON LUN, the granularity of replication is the entire LUN with all its virtual disks.
- 4) Use the consistency technology available on SnapView/MirrorView, when making copies of VMFS volumes that span multiple CLARiiON LUNs.

- 5) The VMFS replica must be assigned to a different ESX server. The target ESX server must not already have access to the original source VMFS volume.
- 6) For source LUNs configured as RDM volumes, the replica can be presented to the same ESX server but to a different Virtual Machine unless the guest OS is qualified to allow same host access.
- 7) RDM volumes cannot be created when the ESX server is booting from SAN. VMFS volumes can be created when the ESX server is booting from SAN. If ESX server is not booting from SAN, Virtual Machines can be configured using either VMFS or RDM volumes.
- 8) Ensure the snapshot is activated or clone fractured before presenting them to an ESX server.
- 9) When replicating OS images, you will only have a crash consistent copy if the Virtual Machines are not shutdown during the replication process.
- 10) Please note that replicating a suspended Virtual Machine will result in a crash consistent copy.
- 11) Admsnap, Admhost utilities must be installed only on Virtual Machines. With admsnap or admhost installed on the Virtual Machine, most of the commands issued on VMFS volumes will fail, since VMFS volumes do not support sscsi pass-through commands to talk to the CLARiiON. Use Navisphere Manager or Navisphere CLI instead. The only commands that will work with VMFS volumes are admsnap flush and admhost flush. Admsnap is not supported under Network Virtual Machines with either RDM or VMFS volumes.
5. Supported with VMFS and VMFS-2.
6. PowerPath is not supported on VMWare ESX. The VMWare ESX native failover functionality is supported.
7. While using an AX100-series storage system managed using Navisphere Express with VMware ESX Server, Snapshots cannot be assigned to the ESX server.
8. Replication of both VMFS and Raw Device Mapping (RDM) volumes is supported using Symmetrix replication software (SRDF and TimeFinder). Please refer to the solution guide, 'VMware ESX Server Using EMC Symmetrix Storage Systems' for details. Replicas of application data volumes of physical (native) servers created using Symmetrix replication software can be presented to a VMware ESX Server.
- Note:
- 1) Replication of Operating System volumes and application volumes from a virtual to physical environment using Symmetrix replication software is not supported at this time.
 - 2) Replication of Operating System volumes, application volumes and application data volumes from a virtual to virtual environment using Symmetrix replication software is supported.
9. Virtual machines running on VMWare ESX are supported booting from the array.
10. BIOS 1.70a3 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
11. Firmware Version 1.91a5 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
12. SNIA HBA API Supported.
13. Driver Version 2.01g This driver is included in the VMware ESX kernel.
14. Dual port PCI-X fibre channel mezzanine card option is embedded. No PCI/PCI-X slots available.
15. BIOS 1.70a3
16. VMWare ESX Server itself is supported booting from external array.
17. EMC supported drivers, firmware, and boot BIOS can be downloaded from <http://www.emulex.com> in the EMC section, by obtaining the supported driver for the Emulex LP1050-E.
18. Firmware Version 1.91a5
19. BIOS 1.45 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
20. Driver Version 7.04.00 This driver is included in the VMware ESX kernel.
21. HPQ (Compaq) Proliant server models that are not listed in the ESM but are only differentiated from supported models by an "R" designator, are rack-mountable servers and are supported.
22. PowerEdge 2550 and PowerVault 775N support a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
23. Dell PowerEdge 6450 does not support Emulex LP9802/DC HBAs.
24. BIOS 1.47 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
25. Support for 4Gb fibre channel HBAs requires an IBM SPORE to be submitted to IBM.
26. Accepts PCI-X 1.0 and 2.0 HBAs.
27. Driver Version 7.04.00 Requires BIOS 1.45 (HP BL30p specific) available from QLogic at <http://www.qlogic.com> This driver is included in the VMware ESX kernel.
28. Firmware Version 2.50a6
29. Driver Version 7.3.2 This driver is included in the VMware ESX kernel.
30. Supported with VMFS-3.
31. Beginning with ESX Server v2.5.0 Navisphere components are supported as follows: Navi Agent and Server Utility at the console level only; Array Initialization Utility and CLI at both the console and VM levels; Browser interface to Navi Manager at the VM level only.
32. BIOS 1.08
33. Driver Version 7.07.00 This driver is included in the VMware ESX kernel.
34. Driver Version 7.1.14 This driver is included in the VMware ESX kernel.
35. EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.
36. Requires BIOS 1.05 available from the EMC-approved section of the QLogic website at <http://www.qlogic.com>
37. Firmware Version 1.91a1
38. FCode Value 1.70a3
39. Requires BIOS 1.47 available in the EMC-approved section of the QLogic website at <http://www.qlogic.com>
40. BIOS 1.70a3 This driver is included in the VMware ESX kernel. Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
41. Firmware Version 2.50a6 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
42. This HBA is equivalent to the QLogic QLA2340.

- 43. 4GB HBAs are not supported in this server. RPQs for 4GB HBAs will not be approved for this server.
- 44. BIOS 1.05 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
- 45. Firmware Version 2.10a9 Available in the EMC-approved section of the Emulex website. <http://www.emulex.com>
- 46. BIOS 1.17
- 47. Firmware Version 3.01.18
- 48. This dual port HBA is only supported on DELL PE 6850 in the right-most slot (seen from the rear of the server chassis) marked "FC"
- 49. BIOS 1.06 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
- 50. BIOS 1.48 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
- 51. This driver is included in the VMware ESX kernel.
- 52. **BladeCenter support for Windows 2000 operating systems requires an IBM SPORE to be submitted to IBM, then if approved by IBM, be subsequently submitted to EMC as an RPQ for review.**
- 53. Driver Version 7.07.04 This driver is included in the VMware ESX kernel.
- 54. BIOS 1.47
- 55. BIOS 1.12
- 56. BIOS 1.16
- 57. BX6xx-series systems use an embedded fibre channel controller. Contact Fujitsu Siemens to acquire the proper BIOS for the embedded fibre channel controller.
- 58. **FSC Fibre Channel module. Dual channel 2Gbit/s HBA for BX6xx-series blade servers only.**
- 59. BIOS 6.00a1
- 60. Firmware Version 2.50a8
- 61. Booting from the SAN with PowerPath is supported. Refer to the Path Management Software section for supported versions of PowerPath.
- 62. VxVM is not supported on servers booting from the array.
- 63. Only supported in a boot from SAN configuration.

Microsoft Windows* Cluster Software

Windows 2000

EMC has qualified the following cluster software. Please refer to the Base Connectivity table(s) for information concerning server models, HBAs, drivers, firmware, operating system requirements and other special notes.

Microsoft Windows 2000							
No.	Operating System	Cluster Software	Max # Nodes	Infrastructure Software	Server LVM	Storage Array	Comments
1	Microsoft Windows 2000: Advanced Server SP4, Server SP4	Microsoft MSCS1, 2	HA: 2	EMC PowerPath: 4.3.1, 4.4.1, 4.5.0, 4.5.1	Veritas VxVM: 4.0, 4.1, 4.2 (Storage Foundation), 4.3 (Storage Foundation)	Intel SSR212PP f	See3

1. Cluster software is not supported on Stratus ftServers.
2. Valid MSCS quorum resource configurations include both 'shared disk quorum' and 'majority node set' schemes.
3. EMC provides troubleshooting and other technical notes for MSCS cluster solutions. Visit EMC Powerlink and download part number 300-003-012 for the MSCS Troubleshooting/Technical Notes documentation.

Windows 2003 (X64)

EMC has qualified the following cluster software. Please refer to the Base Connectivity table(s) for information concerning server models, HBAs, drivers, firmware, operating system requirements and other special notes.

Microsoft Windows 2003 [x64]							
No.	Operating System	Cluster Software	Max # Nodes	Infrastructure Software	Server LVM	Storage Array	Comments
1	Microsoft Windows 2003 [x64]: DataCenter, DataCenter R2, Enterprise Edition, Enterprise Edition R2, Storage Server Enterprise Edition R2	Microsoft MSCS1	HA: 8	EMC PowerPath: 4.4.1, 4.5.0, 4.5.1, 4.6.0, 4.6.1	Veritas VxVM: 4.0, 4.1, 4.2 (Storage Foundation), 4.3 (Storage Foundation)	Intel SSR212PP f	See2

1. Valid MSCS quorum resource configurations include both 'shared disk quorum' and 'majority node set' schemes.
2. EMC provides troubleshooting and other technical notes for MSCS cluster solutions. Visit EMC Powerlink and download part number 300-003-012 for the MSCS Troubleshooting/Technical Notes documentation.

Windows 2003 (X86)

EMC has qualified the following cluster software. Please refer to the Base Connectivity table(s) for information concerning server models, HBAs, drivers, firmware, operating system requirements and other special notes.

Microsoft Windows 2003 [x86]							
No.	Operating System	Cluster Software	Max # Nodes	Infrastructure Software	Server LVM	Storage Array	Comments
1	Microsoft Windows 2003 [x86]: DataCenter, DataCenter R2, DataCenter SP1, Enterprise Edition, Enterprise Edition R2, Enterprise Edition SP1, Storage Server, Storage Server Enterprise Edition, Storage Server Enterprise Edition R2, Storage Server Enterprise Edition SP1, Storage Server R2, Storage Server SP1	Microsoft MSCS1, 2	HA: 8	EMC PowerPath: 4.3.1, 4.4.1, 4.5.0, 4.5.1, 4.6.0, 4.6.1	Veritas VxVM: 4.0, 4.1, 4.2 (Storage Foundation), 4.3 (Storage Foundation)	Intel SSR212PP f	See3

3. EMC provides troubleshooting and other technical notes for MSCS cluster solutions. Visit EMC Powerlink and download part number 300-003-012 for the MSCS Troubleshooting/Technical Notes documentation.

Red Hat* Linux Cluster Software

Red Hat RHEL (32-Bit)

EMC has qualified the following cluster software. Please refer to the Base Connectivity table(s) for information concerning server models, HBAs, drivers, firmware, operating system requirements and other special notes.

Red Hat RHEL [32-Bit]

No.	Operating System	Cluster Software	Infrastructure Software	Storage Array
1	Red Hat RHEL [32-Bit] 3.0: U6 AS/ES v2.4.21–37.EL, U6+ AS/ES v2.4.21–37.0.1.EL, U7 AS/ES v2.4.21–40.EL	NEC ClusterPro SE 3, Express Cluster 3	EMC PowerPath 4.3.4	Intel SSR212PPf
2	Red Hat RHEL [32-Bit] 4.0: U3 AS/ES v2.6.9–34.EL, U3+ AS/ES v2.6.9–34.0.1.EL, U3+ AS/ES v2.6.9–34.0.2.EL	NEC ClusterPro SE 3, Express Cluster 3	EMC PowerPath 4.5.1	Intel SSR212PPf

Red Hat RHEL (EM64T)

EMC has qualified the following cluster software. Please refer to the Base Connectivity table(s) for information concerning server models, HBAs, drivers, firmware, operating system requirements and other special notes.

Red Hat RHEL [EM64T]				
No.	Operating System	Cluster Software	Infrastructure Software	Storage Array
1	Red Hat RHEL [EM64T] 3.0: U6 AS/ES v2.4.21–37.EL, U6+ AS/ES v2.4.21–37.0.1.EL, U7 AS/ES v2.4.21–40.EL	NEC ClusterPro SE 3, Express Cluster 3	EMC PowerPath 4.3.4	Intel SSR212PPf
2	Red Hat RHEL [EM64T] 4.0: U3 AS/ES v2.6.9–34.EL, U3+ AS/ES v2.6.9–34.0.1.EL, U3+ AS/ES v2.6.9–34.0.2.EL	NEC ClusterPro SE 3, Express Cluster 3	EMC PowerPath 4.5.1	Intel SSR212PPf

Red Hat RHEL [IA64]

EMC has qualified the following cluster software. Please refer to the Base Connectivity table(s) for information concerning server models, HBAs, drivers, firmware, operating system requirements and other special notes.

Red Hat RHEL [IA64]				
No.	Operating System	Cluster Software	Infrastructure Software	Storage Array
1	Red Hat RHEL [IA64] 4.0: U3 AS/ES v2.6.9–34.EL, U3+ AS/ES v2.6.9–34.0.1.EL, U3+ AS/ES v2.6.9–34.0.2.EL	NEC ClusterPro SE 3, Express Cluster 3	EMC PowerPath 4.5.1	Intel SSR212PPf

1. Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
2. Windows 2000 hosts running less than SP4 could be susceptible to data loss during LUN expansion operations. This issue is corrected by Microsoft in SP4, or by applying hotfix 327020. See EMC Solution IS emc73538 and Microsoft Knowledge Base article 327020 for more information.
3. The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
4. This switch is offered by Dell as the Brocade VL2 LC.

1. Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
2. This switch is offered by Dell as the Brocade VL2 LC.
3. The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)

1. VMware ESX does not have dependencies on specific FC-switches and has been found to be broadly interoperable with current generation FC-SW2 compliant Fibre Channel switches. The listed FC-switches reflect the configurations qualified for support with EMC storage arrays.

2. The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)

3. This switch is offered by Dell as the Brocade VL2 LC.

4. Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.

1. Max # of Domains per Fabric: The maximum number of switches a Fibre Channel fabric may contain under the current topology limitations.

2. Switch Management Application Revision: Switch Management versions are backward compatible. You may manage any lower-level switch with a higher level Management Application Revision.

3. Max # Hops: The maximum number of ISLs (Inter-Switch Links) a frame needs to traverse between any input port of the fabric to any output port, assuming all ISLs are active (no ISL or switch fault condition is present). This is the maximum number of hops in a fabric.

4. Switch Management Application Revision: The use of mixed code revisions in the same fabric should be limited to code upgrade processes only. You must always use the management code rev. associated with the highest level of switch code.

5. HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.

6. the configuration is customer instalable

7. This switch is the same as the IBM SAN256M
8. One of the core fabric switches must be configured to be a principle switch. the blade switches should not acquire the role of principle switch.
9. The following setting should be verified: DefaultZoning = False; DefaultVisibility = None
10. The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
11. Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
12. Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
13. Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
14. McDATA Open Trunking is supported at E/OS 6.01.00 and above. For configuration information, see the EMC Networked Storage Topology guide.
15. This switch is offered by Dell as the Brocade VL2 LC.

iSCSI Support Matrix

SSR212PPi / SSR212PP2i Configuration Rules

Note: In this document, *array* means *storage system*.

Dedicated storage networks are highly recommended, but not required. Hosts can connect to an iSCSI array using a Layer 2 (switched) or Layer 3 (routed) network. Also, the presence of VLANs, VPNs, or NAT devices on the network should be transparent to the array and are supported as long as the network quality is adequate.

Switches, Routers, NICs

- Support is provided for industry-standard switches, routers, and Network Interface Cards (NICs).
- Supports up to four HBAs, or one (if the storage system has one SP) or two (if the storage system has two SPs) NICs per server connecting to one storage system.
- A single server can not use HBAs and NICs to connect to the same storage system.
- Servers can use a combination of HBAs and NICs to connect to different storage systems.
- Separate servers, some with HBAs and some with NICs, can connect to the same storage system.
- A single server cannot use a combination of Fibre Channel HBAs and NICs or iSCSI HBAs to attach to a Fibre Channel storage system and an iSCSI storage system at the same time.
- A single server can attach to CLARiiON AX150 iSCSI storage systems and thru IP/FC Switches to CLARiiON AX150 Fibre Channel storage systems when there is common network configuration, failover software, and driver support for both platforms.
- A server can be connected to a maximum of four CLARiiON storage systems.
- An initiator can be connected to a maximum of eight array ports (four dual-SP arrays) or four array ports (four single-SP arrays), but no more than four storage systems.

Environment and Configurability

- The connection to the array must be 1 Gb copper (RJ45). Direct 10/100 NIC connections to the array are not supported, except to management ports.
- Direct-attach is via either 10/100/1000 NIC (operating at 1 Gb) or QLA4010C* HBA.
- Initiators per SP port or storage system:
 - A maximum of 10 initiators can be connected to a single SP AX150SCI port.
 - A maximum of 10 hosts can connect to an AX150SCI.
 - A maximum of 20 initiators can be connected to a dual SP AX150i.
 - A maximum of 10 hosts can connect to an AX150i.
- Target array addresses and names must be configured manually in the Initiators.
- Server names and passwords must be configured manually in the iSCSI storage system.
- Authentication mechanism to be used is the Challenge Handshake Authentication Protocol (CHAP).

Considerations

- The AX150i and AX150SCi have two front-end iSCSI ports per storage processor.
- Currently, it is not possible to boot a Windows system using an iSCSI disk volume provided by the Microsoft iSCSI initiator. The only currently supported method for booting a Windows system using an iSCSI disk volume is via a supported HBA.
- When using multiple NICs in the same server, up to two NICs per host are supported to one AX150I array. If multiple NICs are installed, it is recommended that each be on a different subnet. If multiple NICs are on the same subnet, the MS *Advanced* configuration setup must be utilized in order to take advantage of the additional NICs. If the *Advanced* configuration setup in the MS initiator is not used, additional NICs would be used typically only in a failover situation.
- When HBAs and NICs are present in the same host, the Microsoft iSCSI initiator *must not* be used to control the HBAs. The HBA utility is the only supported interface to the adapter.
- When using the Microsoft iSCSI initiator, all NICs in the same host will use the same iSCSI name. The name will identify the host and the NICs will not be identifiable.
- When using QLogic iSCSI adapters, each HBA has a unique iSCSI name that identifies the individual HBA in the host.
- Dynamic disks are not supported on an iSCSI session using the Microsoft iSCSI initiator.
- EMC supports up to two nodes with iSCSI Windows server 2003 Cluster environments with the latest MS Initiator.

Native iSCSI

Microsoft Windows 2000

Microsoft Windows 2000						
No.	Operating System	Host Bus Adapter	Network Configuration	Storage Array	External Boot	Comments

1. Servers booting from external storage with QLA4010 iSCSI boards require Microsoft iSCSI Initiator 2.0 or 2.02 service to be installed. Note that HBA IQN must be altered prior to Windows installation. Refer to EMC Host Connectivity Guide for information on changing IQN and setting up boot for servers requiring MS iSCSI Initiator service.
2. Microsoft Dynamic Disks are not supported.
3. Powerpath iSCSI 1.1 is not supported with Windows 2000 operating systems.
4. Powerpath 4.3.1 or higher is supported. All paths may be on a single subnet, or multiple subnets may be used.
5. Driver Version 2.1.3.3
6. Firmware Version 2.0.0.0.38
7. BIOS 1.08
8. Configuration utility for QLogic iSCSI HBAs is QLogic SANsurfer available at <http://www.qlogic.com>
9. QLogic iSCSI HBAs require the Microsoft iSCSI Software Initiator 2.0 or 2.02 Service to be installed. The Service is required by Microsoft and is different from the full Microsoft iSCSI Software Initiator.
10. QLogic iSCSI HBAs require the Microsoft iSCSI Software Initiator 2.0 or 2.02 Service to be installed. The Service is required by Microsoft and is different from the full Microsoft iSCSI Software Initiator. Refer to the EMC Host Connectivity guide for additional information on Windows iSCSI components and the Microsoft iSCSI Software Initiator usage.
11. Microsoft Initiator software version 2.0 and later automatically forces IQN's to lower-case. This may require array-side host access reconfiguration.
12. QLogic iSCSI HBAs are supported in any server listed in the ESM Fibre Channel tables that list support for the QLA2340 HBAs with the same operating system version listed here.

13. QLA4010 iSCSI boards booting from external storage require "Spanning Tree" features to be disabled on network switches used in the boot path.
14. Maximum number of iSCSI initiators that can log into an iSCSI target port is 8
15. LAN support includes direct connect (layer 2), switched (layer 2), or routed (layer 3) networks.
16. Routed networks (layer 3) require iSCSI digest to be enabled.
17. EMC provides documentation for iSCSI configurations that contains helpful information for using iSCSI with EMC storage. Visit EMC Powerlink and download part number 300-000-603 for the Windows Host Connectivity Guide.
18. Driver Version Microsoft iSCSI Initiator 2.0 Microsoft iSCSI Initiator software NIC teaming with Microsoft iSCSI Initiator is not supported. EMC recommends that on hosts with multiple NICs that the Software Initiator Source_IP default selection not be used, and a NIC be explicitly selected for maximum path availability. Refer to the EMC Host Connectivity Guide for more detailed information.
19. Driver Version Microsoft iSCSI Initiator 2.02 Microsoft iSCSI Initiator software NIC teaming with Microsoft iSCSI Initiator is not supported. EMC recommends that on hosts with multiple NICs that the Software Initiator Source_IP default selection not be used, and a NIC be explicitly selected for maximum path availability. Refer to the EMC Host Connectivity Guide for more detailed information.
20. The following NICs are not supported: 3COM-3C996B
21. Any Microsoft supported server/NIC for the listed operating system revision is supported.
22. BIOS 1.04
23. Driver Version 2.1.1.0
24. Firmware Version 2.00.00.07
25. Driver Version 2.1.0.3
26. Firmware Version 3.0.0.16
27. BIOS 1.11

1. Maximum number of iSCSI initiators that can log into an iSCSI target port is 8
2. LAN support includes direct connect (layer 2), switched (layer 2), or routed (layer 3) networks.
3. Microsoft Dynamic Disks are not supported.
4. EMC provides documentation for iSCSI configurations that contains helpful information for using iSCSI with EMC storage. Visit EMC Powerlink and download part number 300-000-603 for the Windows Host Connectivity Guide.
5. Powerpath 4.3.1 or higher is supported. All paths may be on a single subnet, or multiple subnets may be used.
6. Powerpath iSCSI 1.1 is supported with Windows 2003 operating systems.
7. Routed networks (layer 3) require iSCSI digest to be enabled.
8. The following NICs are not supported: 3COM-3C996B
9. Any Microsoft supported server/NIC for the listed operating system revision is supported.
10. Driver Version Microsoft iSCSI Initiator 2.02 Microsoft iSCSI Initiator software NIC teaming with Microsoft iSCSI Initiator is not supported. EMC recommends that on hosts with multiple NICs that the Software Initiator Source_IP default selection not be used, and a NIC be explicitly selected for maximum path availability. Refer to the EMC Host Connectivity Guide for more detailed information.
11. Driver Version Microsoft iSCSI Initiator 2.0 Microsoft iSCSI Initiator software NIC teaming with Microsoft iSCSI Initiator is not supported. EMC recommends that on hosts with multiple NICs that the Software Initiator Source_IP default selection not be used, and a NIC be explicitly selected for maximum path availability. Refer to the EMC Host Connectivity Guide for more detailed information.
12. Firmware Version 3.0.0.16
13. Driver Version 2.1.3.8
14. Driver Version 2.1.0.8
15. BIOS 1.11

16. Configuration utility for QLogic iSCSI HBAs is QLogic SANsurfer available at <http://www.qlogic.com>
17. QLogic iSCSI HBAs require the Microsoft iSCSI Software Initiator 2.0 or 2.02 Service to be installed. The Service is required by Microsoft and is different from the full Microsoft iSCSI Software Initiator.
18. Microsoft Initiator software version 2.0 and later automatically forces IQN's to lower-case. This may require array-side host access reconfiguration.
19. QLogic iSCSI HBAs are supported in any server listed in the ESM Fibre Channel tables that list support for the QLA2340 HBAs with the same operating system version listed here.
20. QLA4010 iSCSI boards booting from external storage require "Spanning Tree" features to be disabled on network switches used in the boot path.
21. configurations.
22. SPC-2 flag must be enabled for iSCSI Symmetrix configurations.
23. QLogic iSCSI HBAs require the Microsoft iSCSI Software Initiator 2.0 or 2.02 Service to be installed. The Service is required by Microsoft and is different from the full Microsoft iSCSI Software Initiator. Refer to the EMC Host Connectivity guide for additional information on Windows iSCSI components and the Microsoft iSCSI Software Initiator usage.
24. Clustered hosts may access shared Symmetrix LUNs via iSCSI or Fibre Channel (iSCSI on one node, Fibre Channel on another.)
25. Firmware Version 2.0.0.38
26. BIOS 1.08

1. Servers booting from external storage with QLA4010 iSCSI boards require Microsoft iSCSI Initiator 2.0 or 2.02 service to be installed. Note that HBA IQN must be altered prior to Windows installation. Refer to EMC Host Connectivity Guide for information on changing IQN and setting up boot for servers requiring MS iSCSI Initiator service.
2. Firmware Version 2.0.0.38
3. Microsoft Dynamic Disks are not supported.
4. Powerpath 4.3.1 or higher is supported. All paths may be on a single subnet, or multiple subnets may be used.
5. Powerpath iSCSI 1.1 is supported with Windows 2003 operating systems.

6. Configuration utility for QLogic iSCSI HBAs is QLogic SANsurfer available at <http://www.qlogic.com>
7. QLogic iSCSI HBAs require the Microsoft iSCSI Software Initiator 2.0 or 2.02 Service to be installed. The Service is required by Microsoft and is different from the full Microsoft iSCSI Software Initiator.
8. SPC-2 flag must be enabled for iSCSI Symmetrix configurations.
9. QLogic iSCSI HBAs require the Microsoft iSCSI Software Initiator 2.0 or 2.02 Service to be installed. The Service is required by Microsoft and is different from the full Microsoft iSCSI Software Initiator. Refer to the EMC Host Connectivity guide for additional information on Windows iSCSI components and the Microsoft iSCSI Software Initiator usage.
10. Microsoft Initiator software version 2.0 and later automatically forces IQN's to lower-case. This may require array-side host access reconfiguration.
11. QLogic iSCSI HBAs are supported in any server listed in the ESM Fibre Channel tables that list support for the QLA2340 HBAs with the same operating system version listed here.
12. QLA4010 iSCSI boards booting from external storage require "Spanning Tree" features to be disabled on network switches used in the boot path.
13. Clustered hosts may access shared Symmetrix LUNs via iSCSI or Fibre Channel (iSCSI on one node, Fibre Channel on another.)
14. Maximum number of iSCSI initiators that can log into an iSCSI target port is 8
15. LAN support includes direct connect (layer 2), switched (layer 2), or routed (layer 3) networks.
16. Routed networks (layer 3) require iSCSI digest to be enabled.
17. BIOS 1.08
18. Driver Version 2.1.3.8
19. Support for Windows 2003 Storage Server is limited to the connection to EMC storage arrays. Currently, Windows 2003 Storage Server is not supported in target mode for iSCSI configurations.
20. BIOS 1.04
21. Firmware Version 2.00.00.07
22. Driver Version 2.1.1.5
23. Driver Version Microsoft iSCSI Initiator 2.0 Microsoft iSCSI Initiator software NIC teaming with Microsoft iSCSI Initiator is not supported. EMC recommends that on hosts with multiple NICs that the Software Initiator Source_IP default selection not be used, and a NIC be explicitly selected for maximum path availability. Refer to the EMC Host Connectivity Guide for more detailed information.
24. Driver Version Microsoft iSCSI Initiator 2.02 Microsoft iSCSI Initiator software NIC teaming with Microsoft iSCSI Initiator is not supported. EMC recommends that on hosts with multiple NICs that the Software Initiator Source_IP default selection not be used, and a NIC be explicitly selected for maximum path availability. Refer to the EMC Host Connectivity Guide for more detailed information.
25. The following NICs are not supported: 3COM-3C996B
26. Any Microsoft supported server/NIC for the listed operating system revision is supported.
27. EMC provides documentation for iSCSI configurations that contains helpful information for using iSCSI with EMC storage. Visit EMC Powerlink and download part number 300-000-603 for the Windows Host Connectivity Guide.
28. BIOS 1.11
29. Firmware Version 3.0.0.16
30. Driver Version 2.1.0.8
31. iSCSI Boot from SAN only supported on IBM BladeCenter HS20 (8843). Requires Microsoft iSCSI Initiator 2.02 with boot supported. Contact IBM support to obtain this software

1. Firmware Version 2.00.00.38 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
2. Driver Version 3.23 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
3. BIOS 1.08 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
4. Requires SANsurfer for installation and configuration and is available for download from the EMC-approved section of the QLogic website at <http://www.qlogic.com>
5. QLogic iSCSI HBAs are supported in any server listed in the ESM Fibre Channel tables that list support for the QLA2340 HBAs with the same operating system version listed here.
6. BIOS 1.11 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
7. LAN support includes direct connect (layer 2), switched (layer 2), or routed (layer 3) networks.
8. Requires QLogic firmware version 3.00.00.4 available from the EMC-approved section of the QLogic website at <http://www.qlogic.com>
9. Firmware Version 3.00.00.16
10. Driver Version 3.22 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com> Requires SANsurfer for installation and configuration and is available for download from the EMC-approved section of the QLogic website at <http://www.qlogic.com>
11. Driver Version 5.00.07 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
12. Driver Version 3.22 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
13. Driver Version 5.00.04 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com> Requires SANsurfer for installation and configuration and is available for download from the EMC-approved section of the QLogic website at <http://www.qlogic.com>
14. Driver Version 5.00.04 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
15. The following NICs are not supported: 3COM-3C996B
16. The software initiator is part of the operating system and not an EMC software product. Please refer to the required release note "EMC Linux iSCSI Attach Release Notes", p/n 300-002-672, that can be found on EMC's Powerlink website in Support -> The Document Library -> Host Connectivity for the complete installation information.
17. Driver Version iSCSI Initiator 3.6.2 Driver is integrated into the kernel.
18. Driver Version iSCSI Software Initiator 4.0.1.11 Driver is integrated into the kernel.
19. Driver Version 5.00.04 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com> Driver is integrated into the kernel.
20. Driver Version 5.00.04 Driver is integrated into the kernel.
21. Requires QLogic firmware version 2.00.00.07 available from the EMC-approved section of the QLogic website at <http://www.qlogic.com>
22. BIOS 1.04 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
23. Firmware Version 2.00.00.38
24. Driver Version 3.27 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
25. Driver Version iSCSI initiator 3.6.3 Driver is integrated into the kernel.
26. Firmware Version 2.00.00.07 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
27. Driver Version 3.22

- Driver Version 3.27 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
- Firmware Version 2.00.00.38 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
- BIOS 1.08 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
- Requires SANsurfer for installation and configuration and is available for download from the EMC-approved section of the QLogic website at <http://www.qlogic.com>
- QLogic iSCSI HBAs are supported in any server listed in the ESM Fibre Channel tables that list support for the QLA2340 HBAs with the same operating system version listed here.
- Driver Version iSCSI Initiator 3.6.2 Driver is integrated into the kernel.
- LAN support includes direct connect (layer 2), switched (layer 2), or routed (layer 3) networks.
- The software initiator is part of the operating system and not an EMC software product. Please refer to the required release note "EMC Linux iSCSI Attach Release Notes", p/n 300-002-672, that can be found on EMC's Powerlink website in Support -> The Document Library -> Host Connectivity for the complete installation information.
- The following NICs are not supported: 3COM-3C996B
- Driver Version 5.00.04 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
- BIOS 1.04 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
- Requires QLogic firmware version 2.00.00.07 available from the EMC-approved section of the QLogic website at <http://www.qlogic.com>
- Driver Version 5.00.04 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com> Requires SANsurfer for installation and configuration and is available for download from the EMC-approved section of the QLogic website at <http://www.qlogic.com>
- Firmware Version 3.00.00.16
- BIOS 1.11 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>

16. Requires QLogic firmware version 3.00.00.4 available from the EMC-approved section of the QLogic website at <http://www.qlogic.com>
17. Driver Version iSCSI Software Initiator 4.0.1.11 Driver is integrated into the kernel.
18. Driver Version 5.00.07 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
19. Firmware Version 2.00.00.38
20. Driver Version iSCSI initiator 3.6.3 Driver is integrated into the kernel.
21. Firmware Version 2.00.00.07 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
22. Driver Version 3.23 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
23. Driver Version 3.22
24. Driver Version 5.00.04 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com> Driver is integrated into the kernel.
25. Driver Version 5.00.04 Driver is integrated into the kernel.
26. Driver Version 3.22 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com> Requires SANsurfer for installation and configuration and is available for download from the EMC-approved section of the QLogic website at <http://www.qlogic.com>
27. Driver Version 3.22 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>

SuSE SLES [IA64]

SuSE SLES [IA64]						
No.	Operating System	Host Bus Adapter	Network Configuration	Storage Array	External Boot	Comments
1	SuSE SLES [IA64] 9: SP1 v2.6.5-7.139, SP2+ v2.6.5-7.201, SP2+ v2.6.5-7.202.7, SP3 v2.6.5-7.244, SP3+ v2.6.5-7.252, SP3+ v2.6.5-7.257, SP3+ v2.6.5-7.267, SP3+ v2.6.5-7.276, SP3+ v2.6.5-7.282	Generic NIC 10/1003, Generic NIC GbE3	LAN Only	Intel SSR212PPf i	N	See1, 2

1. LAN support includes direct connect (layer 2), switched (layer 2), or routed (layer 3) networks.
2. The software initiator is part of the operating system and not an EMC software product. Please refer to the required release note "EMC Linux iSCSI Attach Release Notes", p/n 300-002-672, that can be found on EMC's Powerlink website in Support -> The Document Library -> Host Connectivity for the complete installation information.
3. Driver Version iSCSI Software Initiator 4.0.188.18 Driver is integrated into the kernel.

iSCSI Clusters

Microsoft Windows 2003 [x64]

This table describes the support statements for iSCSI Clusters.

Microsoft Windows 2003 [x64]						
No.	Operating System	Cluster Software	Host Bus Adapter	Storage Array	Max # Nodes	Comments
1	Microsoft Windows 2003 [x64] Enterprise: Edition, Edition R2	Microsoft MSCS1, 2	Generic NIC: 10/1006, GbE6	Intel SSR212PPf i	HA: 8	See3, 4, 5
2	Microsoft Windows 2003 [x64] Enterprise: Edition, Edition R2	Microsoft MSCS1, 2	QLogic: QLA4010-E-SP8, 9, QLA4010C-E-SP8, 9, QLA4050-E-SP, QLA4050C-E-SP8, 9, 11, 12, 13, 14, 15, 16, QLA4052C-E-SP8, 9, 11, 12, 13, 14, 15, 16	Intel SSR212PPf i	HA: 4	See4, 5, 10

1. Microsoft iSCSI Initiator required. Refer to Native iSCSI table for currently supported initiator version.
2. Booting from external storage for iSCSI clusters is not supported.
3. EMC provides troubleshooting and other technical notes for MSCS cluster solutions. Visit EMC Powerlink and download part number 300-003-012 for the MSCS Troubleshooting/Technical Notes documentation.
4. Microsoft Dynamic Disks are not supported.
5. iSCSI based cluster configurations require Microsoft QFE 824354. Please contact Microsoft Product Support Services for this QFE.
6. Any Microsoft supported server/NIC for the listed operating system revision is supported.
7. Maximum number of iSCSI initiators that can log into an iSCSI target port is 8
8. QLogic iSCSI HBAs require the Microsoft iSCSI Software Initiator 2.0 or 2.02 Service to be installed. The Service is required by Microsoft and is different from the full Microsoft iSCSI Software Initiator.
9. QLogic iSCSI HBAs are supported in any server listed in the ESM Fibre Channel tables that list support for the QLA2340 HBAs with the same operating system version listed here.
10. Booting from external array is supported for iSCSI clusters with QLA4010 iSCSI HBAs. Refer to Native iSCSI table for supported BIOS versions.
11. Configuration utility for QLogic iSCSI HBAs is QLogic SANsurfer available at <http://www.qlogic.com>
12. SPC-2 flag must be enabled for iSCSI Symmetrix configurations.
13. QLogic iSCSI HBAs require the Microsoft iSCSI Software Initiator 2.0 or 2.02 Service to be installed. The Service is required by Microsoft and is different from the full Microsoft iSCSI Software Initiator. Refer to the EMC Host Connectivity guide for additional information on Windows iSCSI components and the Microsoft iSCSI Software Initiator usage.
14. Microsoft Initiator software version 2.0 and later automatically forces IQN's to lower-case. This may require array-side host access reconfiguration.
15. QLA4010 iSCSI boards booting from external storage require "Spanning Tree" features to be disabled on network switches used in the boot path.

16. Clustered hosts may access shared Symmetrix LUNs via iSCSI or Fibre Channel (iSCSI on one node, Fibre Channel on another.)

Microsoft Windows 2003 [x86]

Microsoft Windows 2003 [x86]						
No.	Operating System	Cluster Software	Host Bus Adapter	Storage Array	Max # Nodes	Comments
1	Microsoft Windows 2003 [x86] Enterprise Edition	Microsoft MSCS1, 2	Generic NIC: 10/10015, GbE15	Intel SSR212PPfi 3	HA: 2	See4, 5, 16
2	Microsoft Windows 2003 [x86] Enterprise Edition: R2, SP1	Microsoft MSCS1, 2	Generic NIC: 10/10015, GbE15	Intel SSR212PPfi 3	HA: 8	See4, 5, 16
3	Microsoft Windows 2003 [x86] Enterprise: Edition, Edition R2, Edition SP1; Microsoft Windows 2003 [x86] Storage: Server, Server SP1	Microsoft MSCS1, 2	IBM QLogic iSCSI Exp Card for BladeCenter (26K6487)8, 11; QLogic: QLA4010-E-SP8, 12, QLA4010C-E-SP8, 12, QLA4050-E-SP, QLA4050C-E-SP7, 8, 9, 10, 11, 12, 13, 14, QLA4052C-E-SP7, 8, 9, 10, 11, 12, 13, 14	Intel SSR212PPfi 3	HA: 4	See4, 5, 6

1. Microsoft iSCSI Initiator required. Refer to Native iSCSI table for currently supported initiator version.
2. Booting from external storage for iSCSI clusters is not supported.
3. Maximum number of iSCSI initiators that can log into an iSCSI target port is 8
4. Microsoft Dynamic Disks are not supported.
5. iSCSI based cluster configurations require Microsoft QFE 824354. Please contact Microsoft Product Support Services for this QFE.
6. Booting from external array is supported for iSCSI clusters with QLA4010 iSCSI HBAs. Refer to Native iSCSI table for supported BIOS versions.
7. Configuration utility for QLogic iSCSI HBAs is QLogic SANsurfer available at <http://www.qlogic.com>
8. QLogic iSCSI HBAs require the Microsoft iSCSI Software Initiator 2.0 or 2.02 Service to be installed. The Service is required by Microsoft and is different from the full Microsoft iSCSI Software Initiator.
9. SPC-2 flag must be enabled for iSCSI Symmetrix configurations.
10. QLogic iSCSI HBAs require the Microsoft iSCSI Software Initiator 2.0 or 2.02 Service to be installed. The Service is required by Microsoft and is different from the full Microsoft iSCSI Software Initiator. Refer to the EMC Host Connectivity guide for additional information on Windows iSCSI components and the Microsoft iSCSI Software Initiator usage.
11. Microsoft Initiator software version 2.0 and later automatically forces IQN's to lower-case. This may require array-side host access reconfiguration.
12. QLogic iSCSI HBAs are supported in any server listed in the ESM Fibre Channel tables that list support for the QLA2340 HBAs with the same operating system version listed here.
13. QLA4010 iSCSI boards booting from external storage require "Spanning Tree" features to be disabled on network switches used in the boot path.
14. Clustered hosts may access shared Symmetrix LUNs via iSCSI or Fibre Channel (iSCSI on one node, Fibre Channel on another.)
15. Any Microsoft supported server/NIC for the listed operating system revision is supported.
16. EMC provides troubleshooting and other technical notes for MSCS cluster solutions. Visit EMC Powerlink and download part number 300-003-012 for the MSCS Troubleshooting/Technical Notes documentation.

Installation Diagrams

Fibre Channel User Installation Diagrams

Figure 1: A server with a single HBA connected to one port storage processor. Not highly available. Two single points of failure: HBA and SP. PowerPath in a Windows server tells you if that one path has failed.

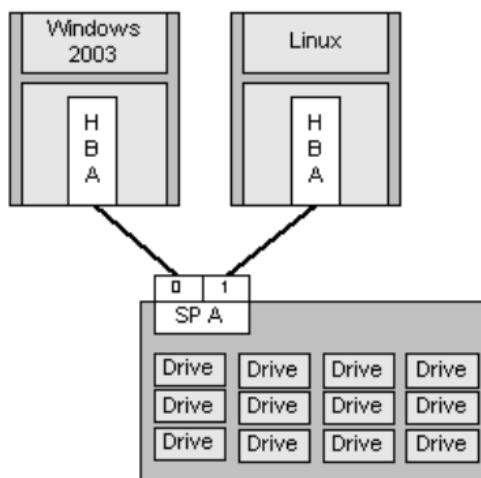

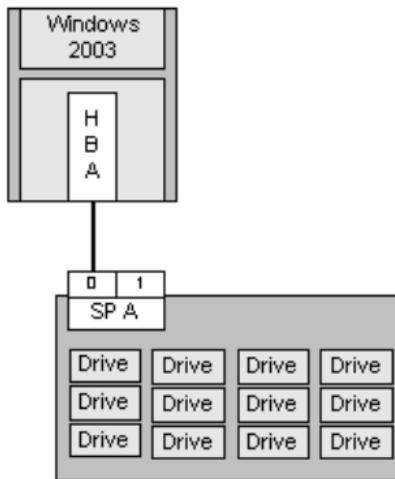

Figure 2: Two servers, each with a single HBA connected to the same SP through different ports. Two single points of failure for each server: HBA and SP. However, two servers have access to the array. PowerPath on each Windows server only tells you if that one path has failed. Servers can be clustered if they are running the same operating system.

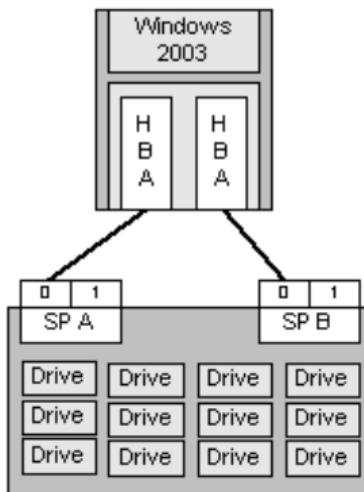

Figure 3: One server with two HBAs connected to a port on each SP. Highly available configuration with one path to each SP. With PowerPath on a server, it can reach any virtual disk if one SP fails or one HBA fails.

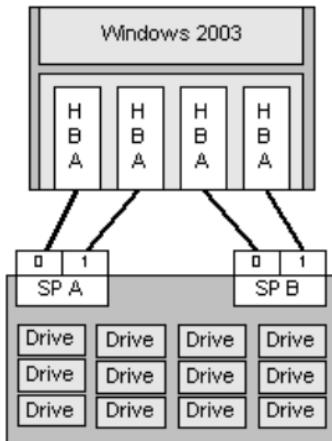

Figure 4: One server with four HBAs connected to an SP port on the two SPs. Highly available configuration with two paths to each SP (multipath). With PowerPath on a server, it can reach any virtual disk if one SP fails or up to three HBAs fail.

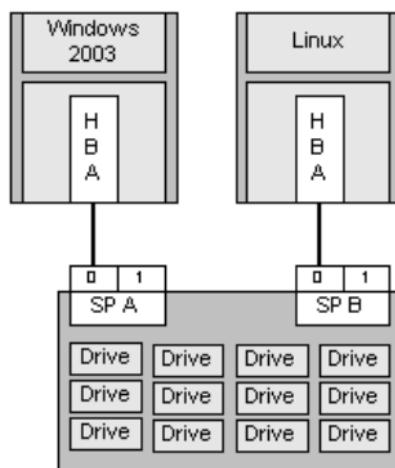

Figure 5: Two servers with one HBA on each connected to an SP port on the two SPs. Not highly available. PowerPath on a server tells you if the path has failed.

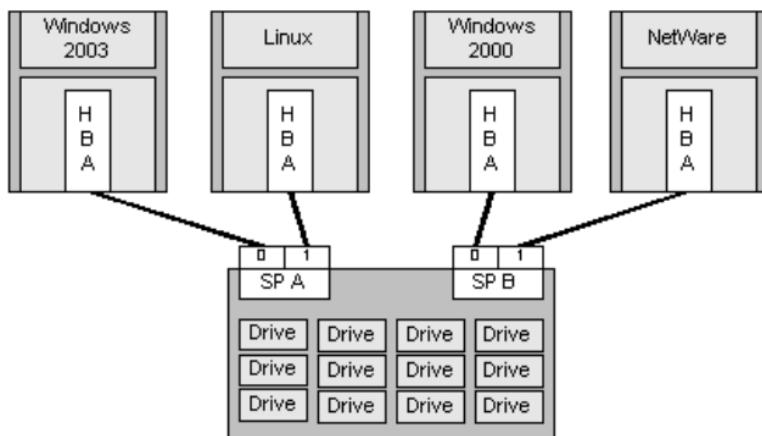

Figure 6: Four servers with one HBA on each connected to an SP port on the two SPs. Not highly available. Each server has only one path to a storage processor. PowerPath on a server tells you if one path has failed.

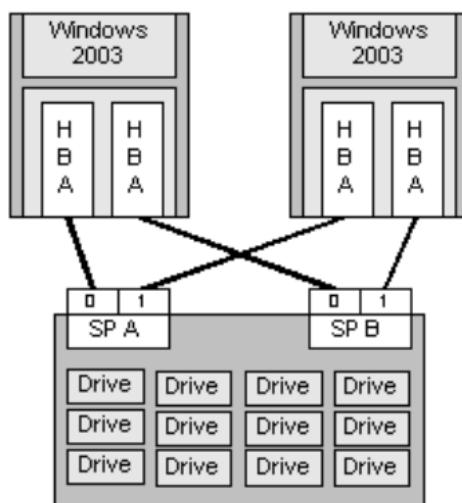

Figure 7: Two servers with two HBAs each connected to an SP port on the two SPs. Highly available configuration where each server has one path to each storage processor. With PowerPath on a server, the server can reach any virtual disk if one SP fails or one HBA fails. If the servers are running the same operating system, they can be clustered.

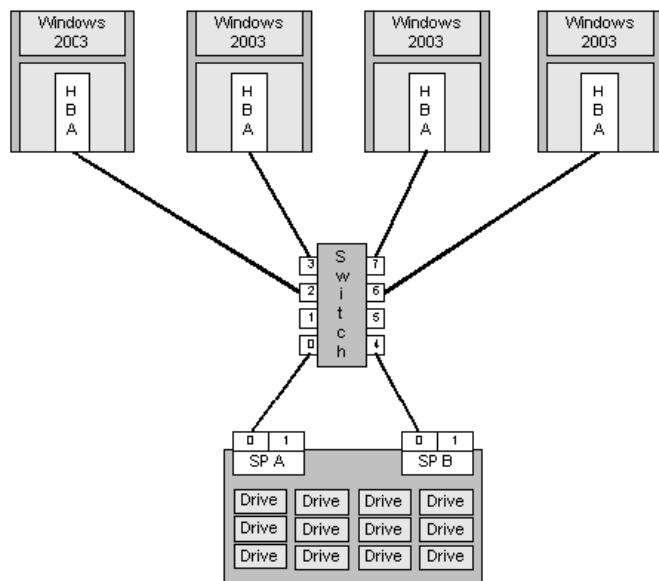

Figure 8: SAN with Brocade® 3250VL2E and with four servers, (supporting up to six), each with one HBA. Each server can reach a port on either SP (see switch zoning explanation below). The server cannot access the storage system if its HBA fails or if the switch port it connects to fails. With PowerPath on a server, the server can reach any virtual disk if one SP fails. If the servers are running the same operating system, they can be clustered.

Preconfigured zoning allows each HBA to reach both storage processors. This illustration shows the Brocade 3250VL2E, where ports 0 and 4 are for storage system ports only. All other switch ports are for HBAs only. Storage system ports connected to port 0 and port 4 can reach all HBAs connected to ports 1, 2, 3, 5, 6, and 7.

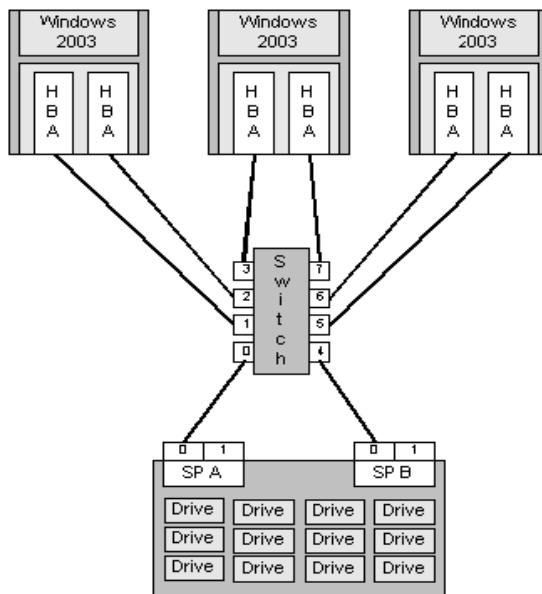

Figure 9: Three servers with two HBAs each can reach one SP port on both SPs. Highly available configuration where each server has one path to each storage processor SP (see switch zoning explanation below). With PowerPath on a server, the server can reach any virtual disk if one SP fails or one HBA fails. If the servers are running the same operating system, they can be clustered.

Preconfigured zoning allows each HBA to reach both storage processors. This illustration shows the Brocade VL2 E, where ports 0 and 4 are for the storage system ports only. All other switch ports are for HBAs only. Storage system ports connected to port 0 and port 4 can reach all HBAs connected to ports 1, 2, 3, 5, 6, and 7.

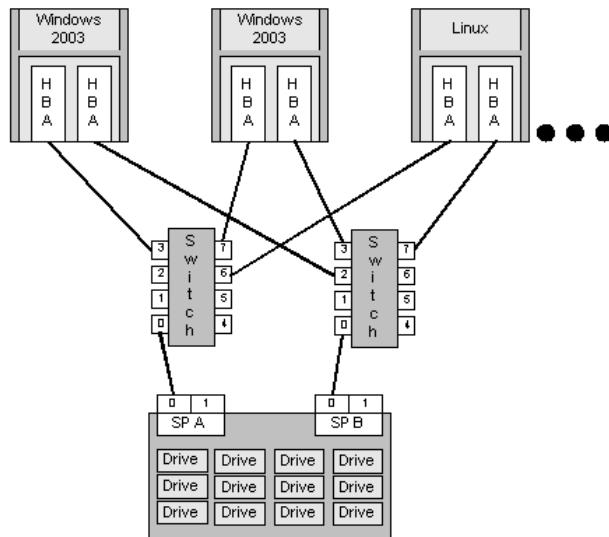

Figure 10: SAN with two Brocade 3250VL2E switches and three servers (and supporting up to six). With two HBAs per server, each can reach a port on each SP. Highly available configuration where each server has one path to each storage processor. With PowerPath on a server, the server can reach any virtual disk if one SP fails, or one HBA fails.

Note: You also can connect the remaining SP ports A1 and B1 to port 4 on each switch to create more high availability (each server will still be able to reach virtual disks if a switch fails, because both SPs are connected to alternate switches). Also, if a server with a single HBA is connected to one of the switches, it will have access to both SPs. If servers are running the same operating system, they can be clustered.

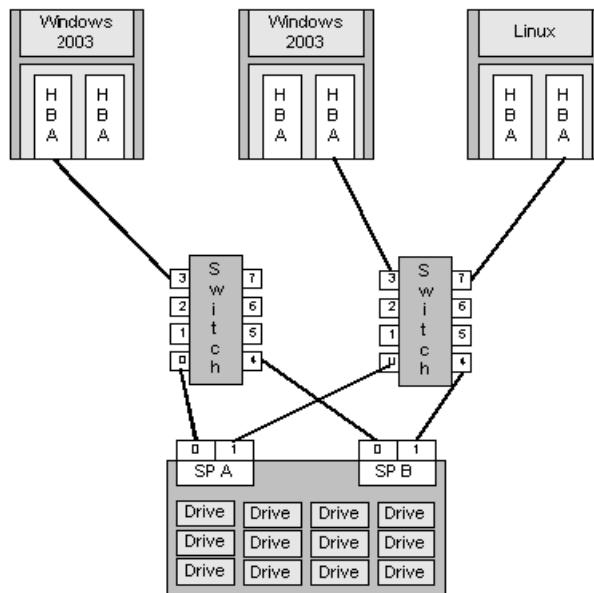

Figure 11: Three servers each with one HBA. Each server can reach an SP port on each SP (see switch zoning explanation below). With PowerPath on a server, the server can reach any virtual disk if one SP fails. While each server has one path to each storage processor, the server cannot access the storage system if its HBA fails or if the switch port to which it connects fails. This configuration allows you to connect the maximum 8 servers to an array. If the servers are running the same operating system, they can be clustered.

Preconfigured zoning allows each HBA to reach both storage processors. This illustration shows the Brocade VL2 E, where ports 0 and 4 are for the storage system ports only. All other switch ports are for HBAs only. Storage system ports connected to port 0 and port 4 can reach all HBAs connected to ports 1, 2, 3, 5, 6, and 7.

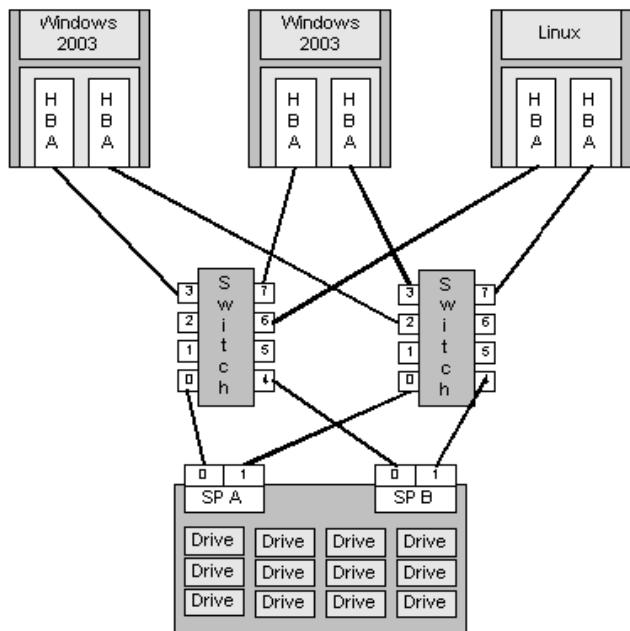

Figure 12: Three servers with two HBAs each can reach both SP ports on each SP. Highly available configuration, where each server has two paths to each storage system SP. With PowerPath on a server, the server can reach any virtual disk if one SP fails, a port on the SP fails, or one HBA fails. In addition, with redundant switches, each server will still be able to reach virtual disks if a switch fails as both SPs are connected to alternate switches. If any servers are running the same operating system, they can be clustered.

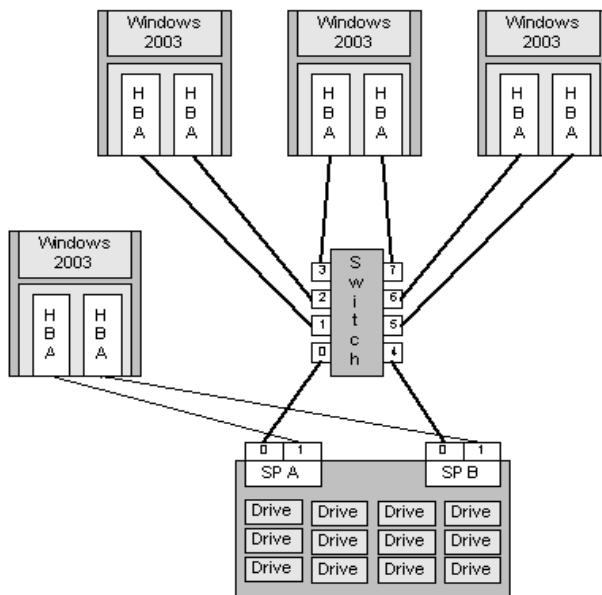

Figure 13: Three servers with two HBAs each can reach one SP port on both SPs. Highly available configuration where each server has one path to each storage system SP (see switch zoning explanation below). With PowerPath on a server, the server can reach any virtual disk if one SP fails or one HBA fails. An additional fourth server with two HBAs directly connected to each SP on the storage system. Because all available ports on the switch are occupied, this configuration allows maximum server utilization. If the servers are running the same operating system, they can be clustered.

Preconfigured zoning allows each HBA to reach both storage processors. This illustration shows the Brocade VL2 E, where ports 0 and 4 are for the storage system ports only. All other switch ports are for HBAs only. Storage system ports connected to port 0 and port 4 can reach all HBAs connected to ports 1, 2, 3, 5, 6, and 7.

Recommended Professional FC Installation Diagrams

It is recommended that the following configurations be installed by a professional storage system engineer.

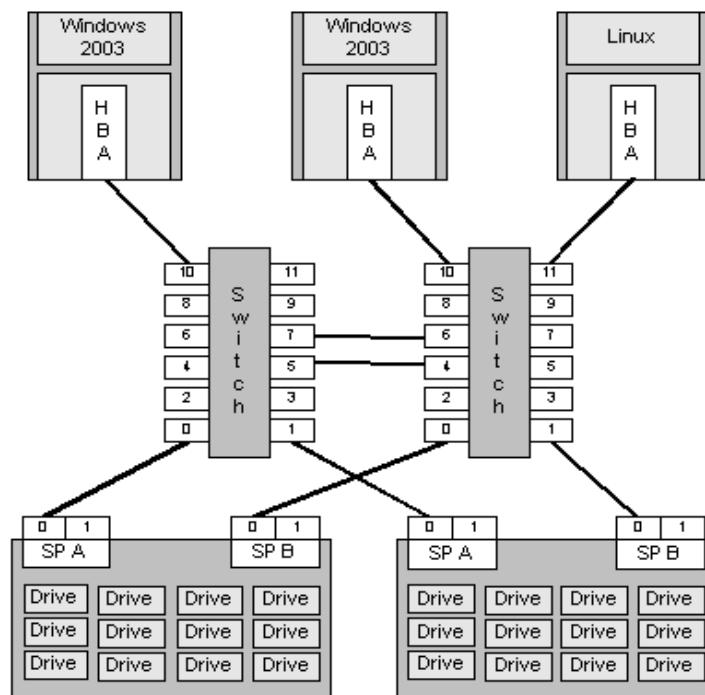

Figure 14: Three servers, each with one HBA. Each server can reach every SP port on each SP (see switch zoning explanation below), because of the inter-switch links on ports 6–7 and 5–4. With PowerPath on the server, the servers can reach any virtual disk if an SP fails. While each server has multiple paths to each storage processor through the inter-switch links, the server cannot access the storage system if its HBA fails or if the switch port to which it connects fails. This configuration allows you to connect the maximum 8 servers to an array. If the servers are running the same operating system, they can be clustered.

Preconfigured zoning allows each HBA to reach both storage processors. This illustration shows the Brocade VL2 E, where ports 0 and 4 are for the storage system ports only. All other switch ports are for HBAs only. Storage ports connected to port 0 and port 4 can reach all HBAs connected to ports 1, 2, 3, 5, 6, and 7.

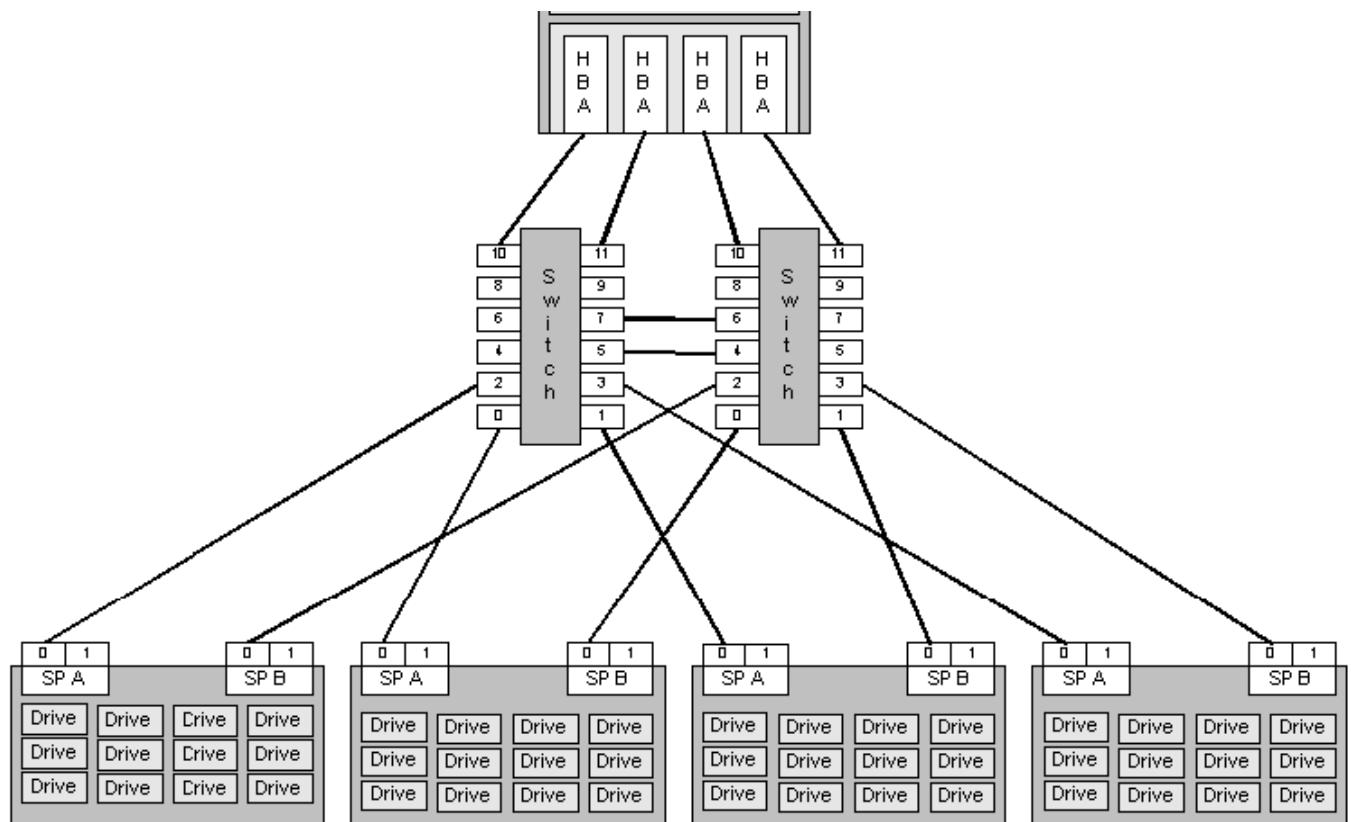

Figure 15: One server with four HBAs. The server can reach every SP port on each SP (see switch zoning explanation below) through more than 1 path, because of the inter-switch links on ports 7–6 and 5–4. With PowerPath on a server, the server can reach any virtual disk if a storage system SP fails or if fewer than four HBAs fail. If the servers are running the same operating system, they can be clustered.

Preconfigured zoning allows each HBA to reach both storage processors. This illustration shows the Brocade VL2 E, where ports 0 and 4 are for the storage system ports only. All other switch ports are for HBAs only. Storage ports connected to port 0 and port 4 can reach all HBAs connected to ports 1, 2, 3, 5, 6, and 7.

iSCSI Configuration Diagrams

Management ports are not shown on any diagrams. The recommendation is to have management port connection on a different subnet. DATA paths should be on dedicated iSCSI networks.

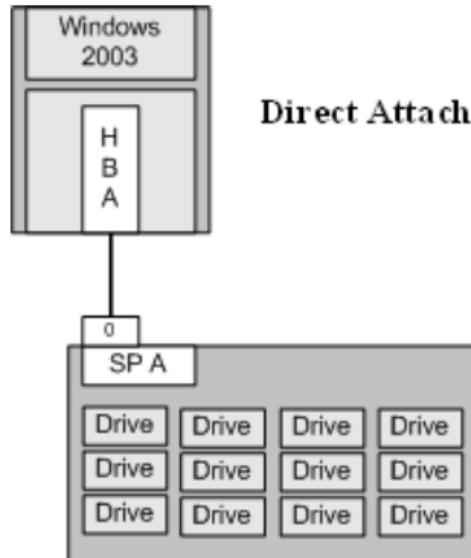

Figure 16: Direct Attach, Single NIC/HBA to one subnet. 1Gb HBA or NIC must be used for direct attach.

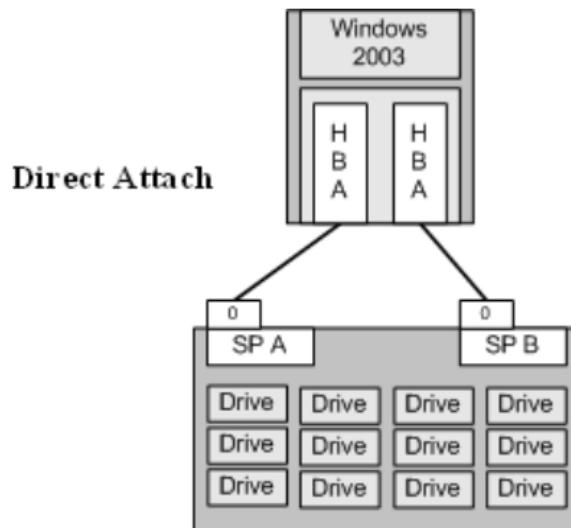

Figure 17: Direct Attach, Multiple NIC/HBA to one array. NICs or HBAs must be on different subnets for proper routing. A server cannot connect to the same array using a mix of NICs and HBAs.

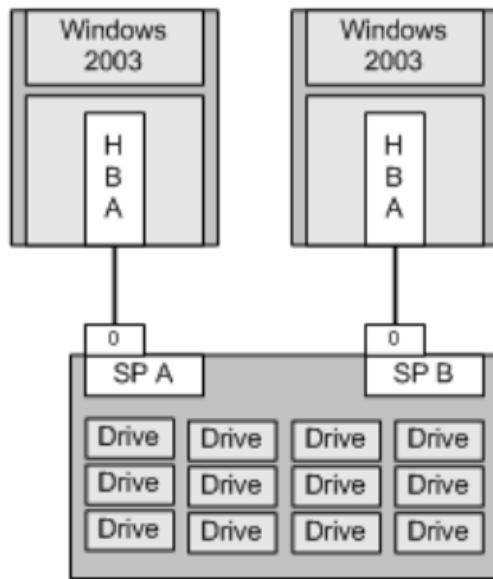

Figure 18: Multiple servers to single storage array. Operating systems do not have to be the same. 1Gb HBA or NIC must be used for direct attach. NICs and HBAs, even if in different servers, must be on different subnets for proper network routing.

Switched Networks

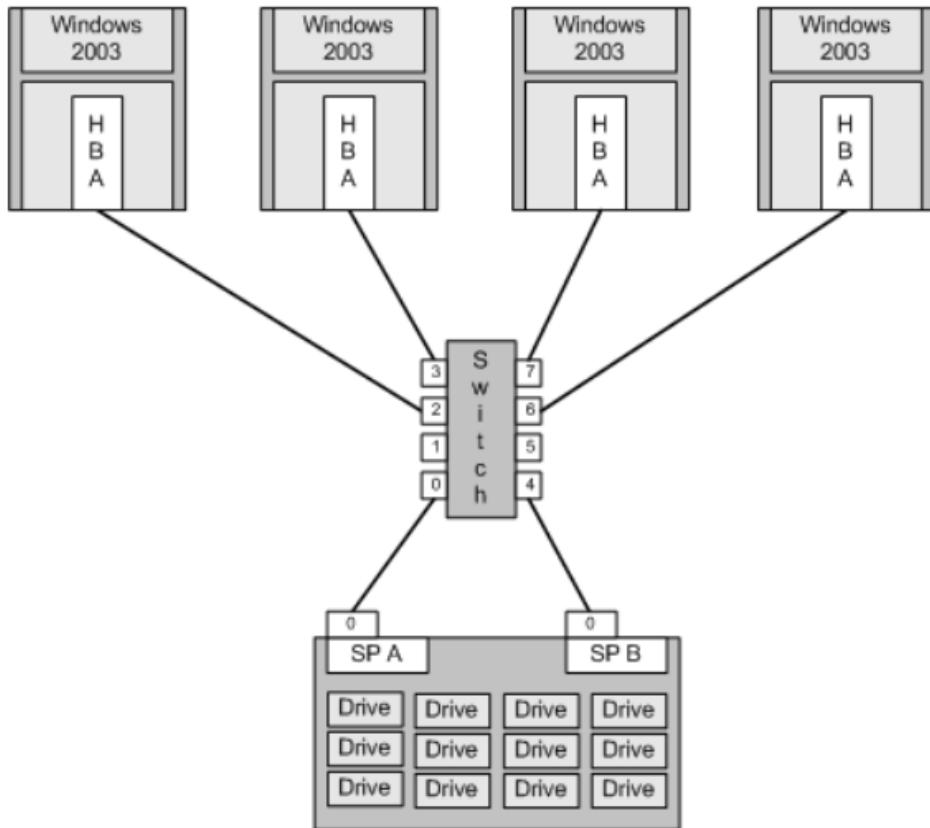

Figure 19: When a switch or router is present, either 10/100/1000 NIC or 1Gb HBA can be used in the server. Operating systems do not have to be the same.

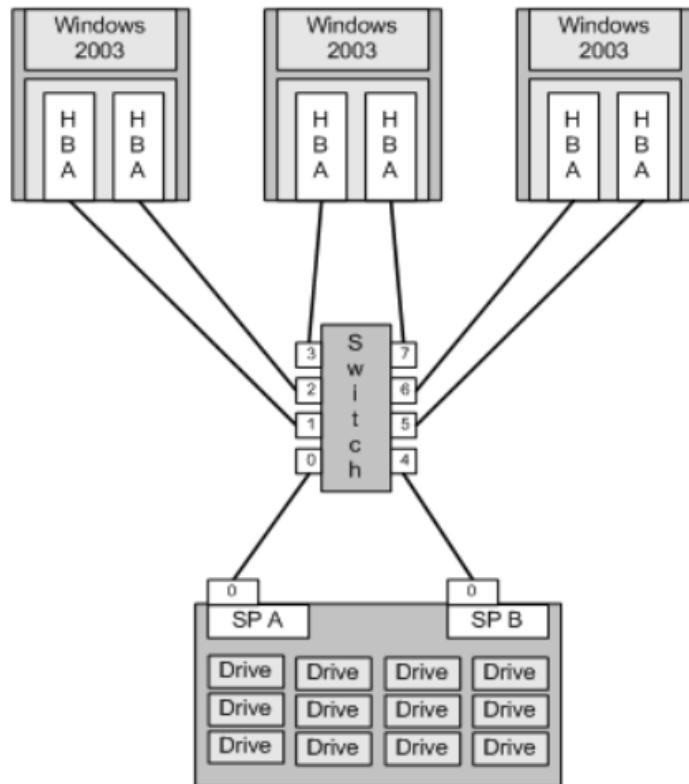

Figure 20: Dual HBAs or NICs. If multiple NICs are on the same subnet, the MS Advanced configuration setup must be utilized in order to take advantage of the additional NICs.

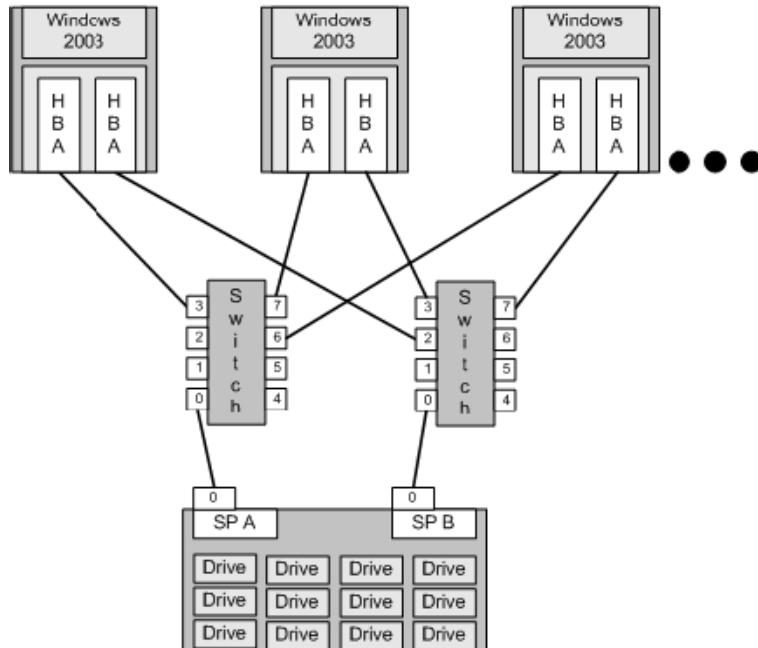

Figure 21: Two NICs or HBAs to separate routers/switched can be supported. However, if two NICs or HBAs are connected to separate switches or routers, they must be on different subnets. The switch/router must be capable of 1Gb connection.

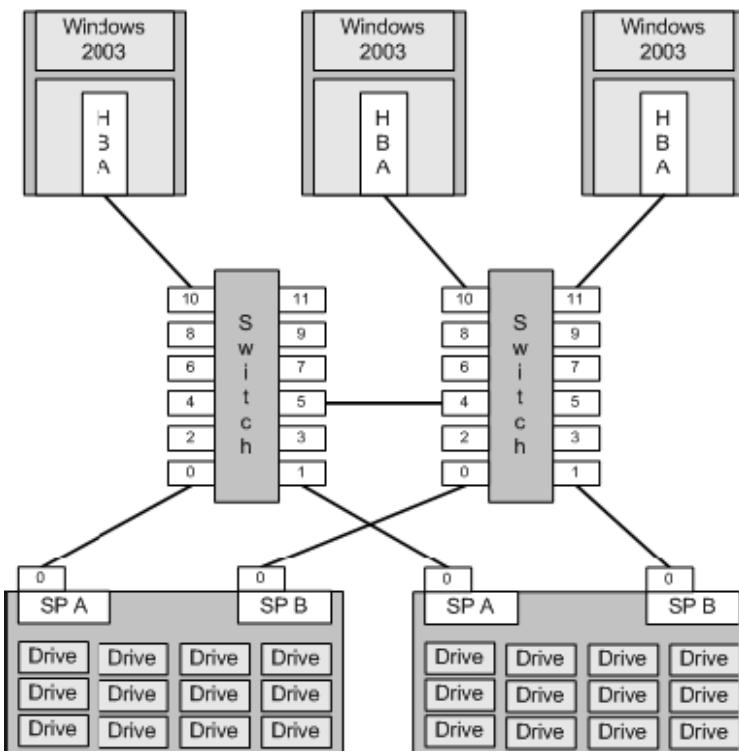

Figure 22: Single or multiple NICs/HBAs can be supported. A single NIC or HBA can be connected to up to 8 SP ports. The switch/router must be capable of 1Gb connection.

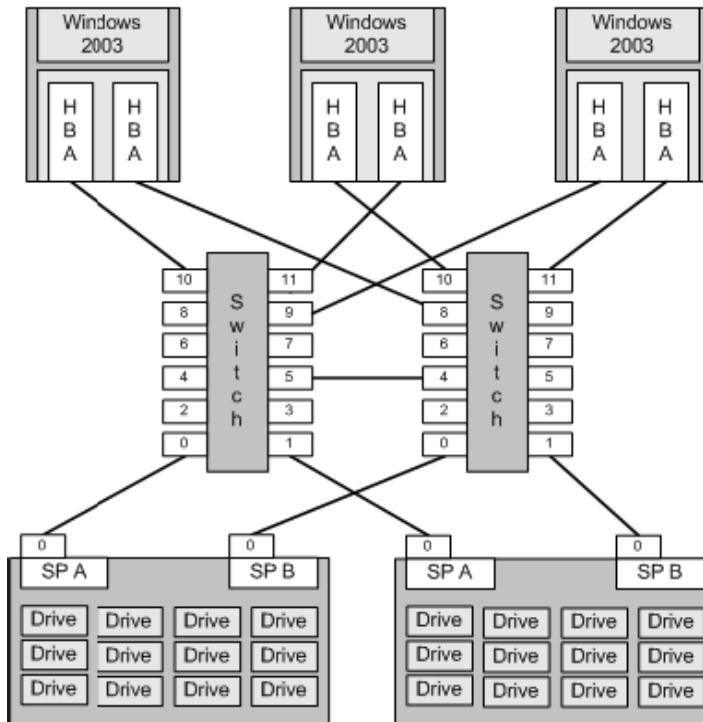

Figure 23: Single or multiple HBAs can be supported. Multiple HBAs from one server can be logged into all ports simultaneously. Router must be capable of 1Gb connection.

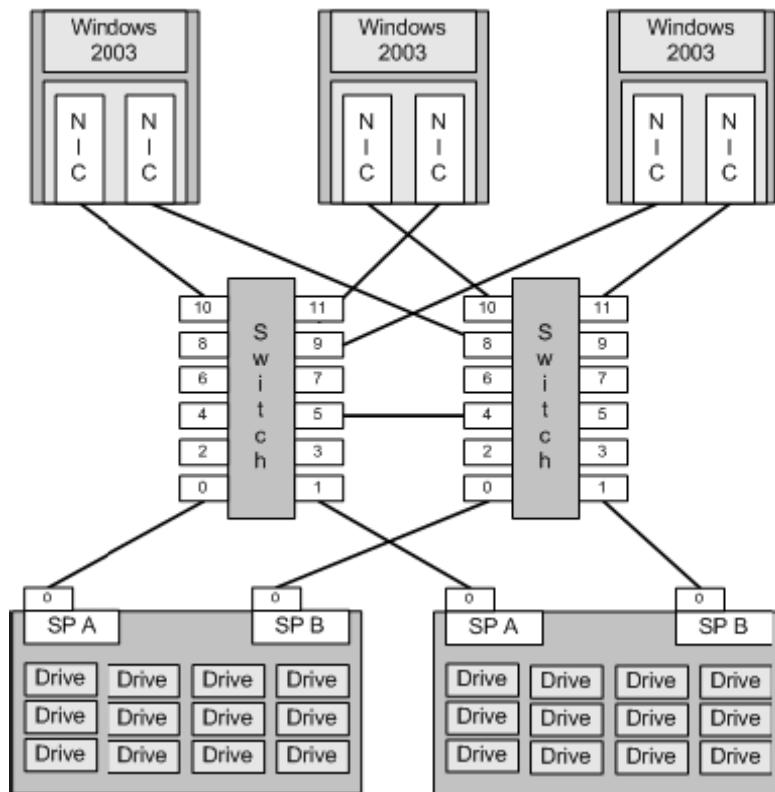

Figure 24: Single or multiple NICs can be supported. Multiple NICs from one server can log into all ports, but only 1 NIC per server can be logged into a port at any given time. Router must be capable of 1 Gb connection.
