Attention!

For Use with Intel® 82440GX Chipset Designs Only

This stepping of the boxed Intel® Pentium® II Xeon™ processor
only supports systems based on the Intel 82440GX AGPset. It will
not support systems based on the Intel 82450NX chipset.

Thermal Management

Proper thermal management is essential for successful system
integration. The boxed Intel Pentium II Xeon processor with its
attached passive heatsink has been thermally qualified with the Intel
MS440GX motherboard and Suncheer* chassis combination.

Integrators using other chassis-motherboard combinations must
perform thermal evaluation to ensure the processor thermal specifi-
cations are met. For more information on thermal management on
the Intel Pentium II Xeon processor, refer to document number
24545, "Thermal Management Notes", on the World Wide Web at
http://support.intel.com.
