

Attention!

The Intel® Pentium® III Xeon™ processor at 733 MHz *requires thermal evaluation*. Care should be taken to select a chassis that ensures sufficient airflow. Intel has tested several ATX chassis and has determined that some chassis provide inadequate airflow, and others require additional fans to generate sufficient airflow through the processor(s). If you are using an ATX motherboard, select an ATX chassis that can accommodate extra 12 cm fans, and perform thermal evaluation following the *Thermal Management Notes* document found on: <http://support.intel.com/support/processors/>

Also, most WTX chassis are designed to make it much easier to achieve the required airflow, especially for higher frequency processors, and most WTX chassis will accommodate both WTX and ATX form-factor motherboards. More information can be found on the WTX form factor, including a list of chassis manufacturers, at <http://www.wtx.org>. Consult your chassis manufacturer for compatibility with your motherboard.
