STK300 - *mega**AVR**™*
STARTER KIT

The STK300 megaAVR Starter Kit is a complete low-cost evaluation system for the Atmel megaAVR RISC microprocessors. The kit features are:

- Supports all megaAVR devices

- Includes In-System Programming cable for any AVR® MCU

- A/D Converter support with adjustable analog reference

- LCD interface with contrast adjustment

- RS232 port for PC interface

- Real-time clock crystal

- Low-current dual rail supplies for external op amps

- User selectable voltage operation – 3.3V or 5V

- Dual-voltage brown-out detection

- 8 push-button switches and 8 LEDs

- All device ports easily accessible through 0.1" header connectors

- External SRAM interface with latch socket

- ATmega103 microcontroller included

- megaAVR Application Builder Software included – actually writes code for peripheral setup

- Includes Atmel AVR ISP software
