DESCRIPTION

The M54/74HC125/126 are high speed CMOS QUAD BUS BUFFER (3-STATE) FABRICATED IN SILICON GATE C^2MOS technology.

They have the same high speed performance of LSTTL combined with true CMOS low power consumption.

These devices require the same 3-STATE control input G to be taken high to make the output go into the high impedance state.

All inputs are equipped with protection circuits against static discharge and transient excess voltage.

(*) C_{PD} is defined as the value of the IC's internal equivalent capacitance which is calculated from the operating current consumption without load. (Refer to Test Circuit). Average operting current can be obtained by the following equation. $I_{CC}(opr) = C_{PD} \bullet V_{CC} \bullet f_{IN} + I_{CC}$
