

# Thyristors and Triggers

---

## In Brief . . .

- Motorola's broad line of Thyristors includes. . . .
- A full line of TRIACs and SCRs covering a forward current range from 0.5 to 55 amperes and blocking voltages from 15 to 800 volts.
  - Plastic package for lowest cost which includes the fully insulated plastic Case 221C (TO-220 Isolated).
  - An extensive line of trigger devices that includes SIDACs, PUTs and SBS.

Then there are the special applications devices for Ignition circuits and Crowbar applications. Also included are isolated packaged devices for appliances and surface mount packages for surface mounting in space-saving requirements.

Finally, there is the continued Motorola investment in discrete-product R & D producing new capabilities such as transient SIDACs for use in circuits sensitive to high voltage transients.

**Table 4. Programmable Unijunction Transistor — PUT**

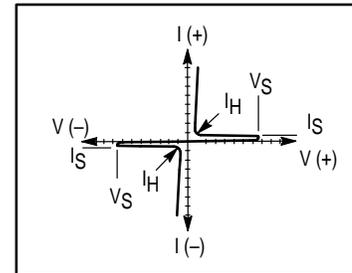

Similar to UJTs, except that  $I_V$ ,  $I_P$  and intrinsic standoff voltage are programmable (adjustable) by means of external voltage divider. This stabilizes circuit performance for variations in device parameters. General operating frequency range is from 0.01 Hz to 10 kHz, making them suitable for long-duration timer circuits.

Devices listed in bold, italic are Motorola preferred devices.

**Table 5. Silicon Bidirectional Switch (SBS)**

This versatile trigger device exhibits highly symmetrical bi-directional switching characteristics which can be modified by means of a gate lead. Requires a gate trigger current of only 250 μAdc for triggering.

**Table 6. High Voltage Bidirectional TVS Devices Primary Protection**

Transient Voltage Suppression (TVS) devices are break-over-triggered crowbar protectors. Turn-off occurs when the surge current falls below the holding current value.

Device Type	I <sub>TSM</sub> Amps	V <sub>BR</sub> Volts (Min)	V <sub>BO</sub> Volts (Max)
